The fund

Fund performance objective and benchmark

The fund's investment objective is to achieve capital growth over the medium-to-long term (5-7 years) by investing at least 80% in the shares of US companies listed on the New York Stock Exchange. The fund's performance target is to outperform, after the deduction of charges, the MSCI USA £ Net Total Return Index (the "Index") over a rolling 7-year period. For further information on the fund's index, please refer to the Prospectus.

Benchmark: MSCI USA £ Net Total Return Index

Performance commentary

The fund recorded a positive return for the third quarter, outperforming the benchmark index, with the majority of outperformance attributable to stock selection..

Ollie's Bargain Outlet was the largest contributor to performance during the quarter. Ollie's is a Mature consumer discretionary business which operates a deep discount US retailer, which sources excess/surplus general merchandise stock and sells at "distressed prices" up to 70% discount vs department store and 20-50% below mass-market retailers. During the period the company announced Q2 results that were ahead of expectations demonstrating strong momentum in the business operations.

Delta Airlines, a Turnaround, has been hurt by higher fuel prices in the recent period, putting some pressure on shares along with the potential for a significant increase in costs with the new contract for pilots. There is a shortage of pilots in the industry, which acts as a barrier to increasing industry capacity and limiting the potential for new low-cost airlines to enter the market. HCA Healthcare the US hospital and clinic operator in the Compounding segment of the Life Cycle, declined over the quarter. During the period the company announced Q2 results that were ahead of expectations and raised guidance for the full year. We continue to have a positive view on the wealth creation that the company can generate at the corporate level. Timken, the US industrials business in the Mature section of the Life Cycle declined over the period, the company announced weak Q2 results in August which missed analysts' expectations, management also cut their full year earnings guidance. The company put the weakness down to destocking, which they expect to be transient.

Visa Inc. Class A	1.74
Total	36.86

Fund activity

Whilst there remains significant geopolitical and macroeconomic risk, we remain focused on using our established investment process to generate alpha through bottom-up stock picking. With this volatile background, we believe that our approach of diversifying the strategies across broad range of companies from different sectors and stages of their Life Cycle will allow performance to continue to be driven more by the success of our hunting for superior shareholder wealth creating companies with undervalued long term cash flows than by the prevailing winds of the macroeconomy, or factors such as growth or value styles being in vogue.

Sector weights

Market commentary

Equity markets made losses over the period under review on fears that policy will remain tighter for longer than expected, which saw equities drop to their lowest levels since early June. The quarter also saw a market rotation with the best performing sector being the fossil fuel-based energy sector, which had underperformed in prior quarters, and the information technology sector giving back some gains, having been the best performing sector year-to-date. For the third quarter, MSCI World and MSCI All Countries World Index (ACWI – which also includes 26 emerging markets) produced negative returns for the quarter in US dollar terms. Looking at national MSCI indices, the strongest market was Japan, while the weakest was Eastern Europe. In terms of style, the MSCI World Growth Index produced weaker returns versus the MSCI World Value Index.

The price of Brent crude oil soared by 24.7%, to \$92.20 a barrel. Copper futures also declined a further 1.5% in dollar terms on the back of warning signs emerging of a weakening in global demand as China's economic rebound stalls.

The US dollar appreciated by 3.1% against the yen, by 2.96% against the euro, and by 4% against sterling. On a translational basis, sterling's strength against the dollar impacts sterling investors in overseas assets as it lowers the returns over the quarter. However, the weaker dollar will benefit any emerging markets countries and companies that have borrowed in dollars.

The third quarter was characterised by mixed data around the world, with central banks coming towards the end of their rate hiking path, but with cuts still seemingly a while away. The global economic picture is rosier now than it was at the start of the year, but global growth is spluttering again amid a disappointing bounce in China activity, slow-to-no growth in Europe and against a backdrop of restrictive monetary policy. The US still looks at risk of recession too, even if activity data to date has been fairly robust.

Inflation has fallen significantly and, although higher energy prices threaten a widespread revival in headline inflation, other factors – including a weak economic activity backdrop – should pull inflation lower still. With taming inflation still the priority for central banks, there is still a possibility of further rate hikes from the Federal Reserve (Fed), European Central Bank (ECB) and Bank of England (BoE), but peak rates look to be near, with real rates now well into positive territory.

Risks and Warnings

Investment Risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Concentration risk

The price of Funds that invest in a reduced number of holdings, sectors, or geographical areas may be more heavily affected by events that influence the stockmarket and therefore more volatile.

EPM Techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Exchange Rate Risk

Changes in currency exchange rates may affect the value of your investment.

Liquidity Risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty Risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Glossary

Active share

Active share is a measure used to assess the degree of difference between the portfolio's holdings and its benchmark.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.

Sector weights

Breakdown of holdings by GICS (Global Industry Classification Standard) sector relative to the benchmark index.

Top 10 holdings

Top 10 assets held by market value, excluding derivatives and cash.

Tracking error

Tracking error measures how closely a portfolio follows its benchmark. It quantifies the standard deviation of the difference in return between the portfolio and benchmark.
