Royal London Short Duration Gilt Fund

Quarterly Investment Report

30 September 2023

Quarterly Report

The fund as at 30 September 2023

The purpose of this report is to provide an update on the Royal London Short Duration Gilt Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

Contents

ROYAL LONDON
ASSET MANAGEMENT

The fund

Fund performance objective and benchmark

The fund's investment objective is to achieve a total return over the medium term (3–5 years) by investing at least 80% in short-duration (1-5 years) UK government bonds, which are also known as gilts. The fund's performance target is to outperform, after the deduction of charges, the FTSE Actuaries UK Conventional Gilts up to 5 Years Total Return GBP Index (the "Index") over rolling 5-year periods. For further information on the fund's index, please refer to the Prospectus.

Benchmark: FTSE Actuaries UK Conventional Gilts up to 5 Years Total Return GBP Index

Performance commentary

In the third quarter, the fund was ahead of its benchmark, and remains ahead year-to-date.

The fund's primary driver of outperformance was its long duration position. The fund started the quarter about 0.5 of a year long, moved as high as 0.6 but finished the quarter around 0.4 of a year long. The fund's strategic duration position is all held in 2029 maturity bonds.

Another contributor to performance was the fund's relative value positioning as we held a large position in 0.25% 2025 bonds and the 3.5% 2025s, both of which outperformed surrounding bonds. The fund also held an overweight position in 4.125% 2027s versus longer-maturity peers which led to outperformance as that part of the curve steepened.

Performance and activity

Fund activity

In late September, we picked up dollar market bonds, namely in the US and Australia – selling 5-year gilts into these markets as they offered additional yield, particularly in the US as yields are hitting multi-decade highs. We are now long US and Aussie bonds as we believe gilts no longer stand out as cheap in a global context.

The fund does not hold any index linked securities.

Market commentary

Market Overview

The third quarter was characterised by mixed data around the world, with central banks coming towards the end of their rate hiking path, but with cuts still seemingly a while away. The global economic picture is rosier now than it was at the start of the year, but global growth is spluttering again amid a disappointing bounce in China activity, slow-to-no growth in Europe and against a backdrop of restrictive monetary policy. The US still looks at risk of recession too, even if activity data to date has been fairly robust.

Inflation has fallen significantly and, although higher energy prices threaten a widespread revival in headline inflation, other factors – including a soggy economic activity backdrop – should pull inflation lower still. With taming inflation still the priority for central banks, there is still a possibility of further rate hikes from the Federal Reserve (Fed), European Central Bank (ECB) and Bank of England (BoE), but peak rates look to be near, with real rates now well into positive territory.

In the US, the real economy has been surprisingly resilient in the face of tighter credit conditions. However, the fourth quarter looks set to see a few growth challenges, monetary policy is restrictive and employment growth has slowed. A number of recession indicators are still flashing. Business survey data paints a mixed picture, with PMIs consistent with flattish growth while ISM surveys look more upbeat. Employment gains have slowed on the non-farm payrolls data and job openings have fallen a long way from their highs consistent with a less tight labour market. Housing-related activity remain subdued.

The Fed continued to hike rates over the quarter against a still resilient labour market backdrop, to help ensure inflation returns sustainably to target. Over the third quarter, the Fed raised the Fed Funds target range by another 25bps to 5.25-5.50%. As of their September meeting, the mean forecast of participants still had one more rate increase in it for the rest of 2023, but removed some of the rate cuts that participants had pencilled in for 2024. Over the quarter, CPI inflation rose to 3.7% year-on-year by August, from 3.0% in June driven by higher energy inflation, but with core continuing to drift lower over the period. The core PCE measure of inflation fell over the quarter and month-on-month was only 0.1% in August. Second quarter GDP recorded a steady-ish 2.1% quarter-on-quarter annualised. More timely economic activity indicators were mixed over the quarter. The government shutdown stand-off was eventually resolved at the last minute, but with a stop-gap measure that will fund the government only through to mid-November 2023.

The euro area economy may already be in mild recession and forecasts continue to pencil one in. Business surveys have deteriorated and look consistent with falling private sector output. Tighter monetary policy will still be feeding through to the real economy. Bank lending conditions have tightened and loan growth has slowed.

Over the third quarter, the ECB again raised rates 50bps. At the September meeting, they signalled that current levels would potentially mark the peak, while leaving the door open for further rate hikes if necessary. Euro area CPI fell to 4.3% year-on-year in September from 5.5% in June. Core CPI fell over the same period too and showed a clearer downward trend than over the previous quarter. The euro area economy grew (only) 0.1% on a quarterly basis in the second quarter - the same outcome as seen in the first three months of the year. However, business surveys signalled a deterioration in activity into more recessionary territory by the end of the quarter.

UK data released in the third quarter painted a picture of slower economic activity, with high but falling inflation albeit featuring still-strong domestic inflationary pressure. Second quarter GDP grew 0.2% quarter-on-quarter in real terms. Upward back revisions to GDP over the quarter showed Q2 GDP as 1.8% above pre-pandemic levels (0.2% previously), with the bulk of revisions from before 2022. The data showed that the UK economy experienced a less-bad pandemic in GDP terms than first estimated. Meanwhile, inflation fell, and tended to surprise on the downside at headline level: year-on-year CPI inflation fell from 8.7% for the May release to 6.7% for the August release. Core inflation fell from 7.1% to 6.2% over the same period. Consistent with a somewhat looser-looking labour market and lower than expected inflation, the Bank of England raised rates another 25bps in August to 5.25% but chose to keep rates on hold at their September meeting.

The outlook is still lacklustre in the UK. A technical recession is still assumed for the UK in the next 12 months, but a modest one. There are still risks from the housing sector and consumer spending has yet to respond fully to tighter monetary policy. GDP growth has been weak since late 2021 and PMI business surveys point to deterioration, falling into recessionary territory over the summer. Inflation should fall significantly at headline level, but domestically driven inflation continues to look strong, despite higher interest rates. The labour market is starting to look less tight and lead indicators of wage growth suggest some slowing ahead but so far, pay growth remains much too strong to be consistent with hitting a 2% inflation target.

UK government bonds struggled, being impacted by the higher-than-expected inflation print. Gilts delivered a -0.63% return (FTSE Actuaries) over the third quarter with the benchmark 10-year gilt yield rising to 4.44% from 4.39% but pulled back from a 4.75% high seen in mid-August. There was a marked difference in maturities, with short-dated bonds materially outperforming longer-dated bonds, as expectations that rates may be at a peak helped short-dated bonds start to anticipate cuts in late 2024, while longer-dated bonds remained weak due to concerns about the long-term inflation environment and significant gilt supply.

Market commentary

UK index-linked markets significantly underperformed on a global basis, returning -4.69% (FTSE Actuaries) in the third quarter. Real yields on UK 10-year bonds saw a rise over the period, ending the quarter at 0.60%, up from 0.52%. On longer-term bonds, 30-year real yields increased 53bps to 1.48%. Yields on US 10-year index-linked bonds increased to 2.23% from 1.61%, while its German counterpart saw yields rise to 0.45% from 0.07%.

Global government bond markets continued to see yields move higher – a trend that started in mid-2020, reflecting market views that rising inflation would necessitate higher interest rates and that the central banks and governments would ultimately have to withdraw the support measures put in place during the global financial crisis and then used further to help mitigate the economic impact of Covid. With the end of the rate rising cycle possibly in sight, but issuance expected to remain high, markets have become more volatile. In the US, 10-year treasury yields rose to 4.57% from 3.84%, hitting heights not seen in fifteen years, while in Germany the 10-year bund yield increased to 2.84% from 2.39%.

The sterling investment grade credit market (Non-gilt) returned 2.26% over the quarter, as the negative impact of higher government bond yields was offset by tighter credit spreads and the greater proportion of short-dated bonds (which performed well relatively to longer-dated equivalents) in credit indices. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) tightened from 1.48% to 1.38% (iBoxx). Banks and insurance bonds performed strongly in the quarter while senior insurance debt also enjoyed an impressive quarter. No sector saw negative returns, but real estate was broadly flat, and healthcare and transportation lagged other sectors. By rating, there was no standout performer in investment grade, with all bands posting returns between 1.8% and 2.5%. High yield bonds, however, saw a strong quarter, seeing returns of 3.7%. In duration terms, shorter-dated maturities performed significantly better than longer-dated equivalents.

Outlook

We believe that whilst inflation will fall sharply this year, its likely to remain well above target in most economies by the end of the year, and particularly so in the UK. Shallow recessions are possible but are unlikely to be deep enough at this stage to ease the excessive tightness seen in labour markets. As a result, base rates will continue to trend higher, albeit at a much slower pace than over the last 18 months and are unlikely to be cut anytime soon.

In the UK, the market is now expecting base rates to peak around 5.4% later this year, before being cut in late 2024, and falling to a terminal level of around 4.25% by mid-2027. At one point in early July the market was pricing peak rates closer to 6.5%. We believe that gilt yields are well priced for this base rate scenario and at around 4.5%, are attractive to investors. In particular, we see 5-year gilts as attractive.

Supply will be an issue for the market over the next few years, with around £200bn per annum forecast over each of the next five years. Alongside quantitative tightening (where the BoE is selling its gilt holdings back into the market), this will represent a headwind for gilts. However, when considering gilts in a global context, we believe the gilt market is somewhat priced for this.

Risks and Warnings

Investment Risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Concentration risk

The price of Funds that invest in a reduced number of holdings, sectors, or geographical areas may be more heavily affected by events that influence the stockmarket and therefore more volatile.

Credit Risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM Techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest Rate Risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Liquidity Risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty Risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Government and Public Securities Risk

The Fund can invest more than 35% of net assets in different Transferable Securities and Money Market Instruments issued or guaranteed by any EEA State, its local authorities, a third country or public international bodies of which one or more EEA States are members.

Charges from Capital Risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund Analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark.

This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Gross redemption yield

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings, weighted by their current value, net of relevant fund management costs and gross of tax.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.
