Royal London Sustainable Short Duration Corporate Bond Fund

Quarterly Investment Report

30 September 2023

Quarterly Report

The fund as at 30 September 2023

The purpose of this report is to provide an update on the Royal London Sustainable Short Duration Corporate Bond Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

Contents

ROYAL LONDON
ASSET MANAGEMENT

The fund

Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return over the medium term, which should be considered as a period of 3-5 years, by predominantly investing in sterling-denominated corporate bonds, which will primarily be short-duration (5 years or less). Investments in the Fund will adhere to the Investment Manager's ethical and sustainable investment policy. The Fund's performance target is to outperform the ICE Bank of America Merrill Lynch Sterling Non-Gilt (1-5 Years) Total Return (GBP Unhedged) Index (the "Index"), after the deduction of charges, over rolling 5-year periods.

Benchmark: ICE BofA 1-5 Year Sterling Non-Gilt Index

Performance commentary

All issuers within our sustainable holdings offer a net benefit to society or show ESG leadership. As well as reducing risk, we seek out opportunities that are under-researched e.g., bonds that do not fall into mainstream indices or benchmarks and/or are unrated by ratings agencies. Importantly, the sustainable credit proposition provides access to critical sectors that most investors can't access via equity markets. Key themes in the funds include social housing, social & environmental infrastructure, community funding (regulated banks and building societies focused on SME and retail lending), financial inclusion & resilience (such as insurance products to support individuals through shocks) and the energy transition.

Fund activity

Activity has focused on using continued inflows to add to preferred areas and take advantage of attractive new issue premiums. Financials remain the largest part of the market and dominated market issuance and our new issue activity during the quarter. We had a bias towards senior new issues over the period, reflecting the fact that credit spreads in these areas were very attractive. Early in the period we added a new issue from Principality Building Society, these five-year senior bonds coming to market at a healthy credit spread, meaning a total yield in excess of 8%, also adding further to this bond later in the quarter in the secondary market as the spread remained very attractive. We also added a new senior issue from One Savings Bank, which priced with an attractive yield of 9.5%. Furthermore, we added new issues of senior bonds from Nationwide, BNP, Santander UK and Virgin Money.

In the secured sector, we participated in a new issue from Last Mile Logistics – a commercial mortgage-backed security FRN, backed by a portfolio of logistics assets across the UK with an attractive loan to value ratio and AAA rating.

In the secondary market we added selectively to subordinated bank and insurance debt – where yields still remain elevated following the rescue of Credit Suisse. However, underlying credit fundamentals mean that some of these bonds offer excellent value in our view, with legacy bonds from Assicurazioni Generali and Legal & General the most recent examples, while we also added subordinated bonds from Close Brothers at a very attractive cash price. We also added to debt from New York Life and Metropolitan Life, which benefits from policyholder status, and offering an attractive spread for their relatively low risk. Outside of financials, we had opportunities to add to existing holdings such as windfarm transmission company WODS Transmission, Great Rolling Stock and East Japan Railway.

Market commentary

Market overview

The third quarter was characterised by mixed data around the world, with central banks coming towards the end of their rate hiking path, but with cuts still seemingly a while away. The global economic picture is rosier now than it was at the start of the year, but global growth is spluttering again amid a disappointing bounce in China activity, slow-to-no growth in Europe and against a backdrop of restrictive monetary policy. The US still looks at risk of recession too, even if activity data to date has been fairly robust.

Inflation has fallen significantly and, although higher energy prices threaten a widespread revival in headline inflation, other factors – including a soggy economic activity backdrop – should pull inflation lower still. With taming inflation still the priority for central banks, there is still a possibility of further rate hikes from the Federal Reserve (Fed), European Central Bank (ECB) and Bank of England (BoE), but peak rates look to be near, with real rates now well into positive territory.

Global government bond markets continued to see yields move higher – a trend that started in mid-2020, reflecting market views that rising inflation would necessitate higher interest rates and that the central banks and governments would ultimately have to withdraw the support measures put in place during the global financial crisis and then used further to help mitigate the economic impact of Covid. With the end of the rate rising cycle possibly in sight, but issuance expected to remain high, markets have become more volatile.

UK government bonds struggled, being impacted by the higher-than-expected inflation print. Gilts delivered a -0.63% return (FTSE Actuaries) over the third quarter with the benchmark 10-year gilt yield rising to 4.44% from 4.39% but pulled back from a 4.75% high seen in mid-August. There was a marked difference in maturities, with short-dated bonds materially outperforming longer-dated bonds, as expectations that rates may be at a peak helped short-dated bonds start to anticipate cuts in late 2024, while longer-dated bonds remained weak due to concerns about the long-term inflation environment and significant gilt supply.

The sterling investment grade credit market (Non-Gilt) returned 2.26% over the quarter, as the negative impact of higher government bond yields was offset by tighter credit spreads and the greater proportion of short-dated bonds (which performed well relatively to longer-dated equivalents) in credit indices. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) tightened from 1.48% to 1.38% (iBoxx). Banks and insurance bonds performed strongly in the quarter while senior insurance debt also enjoyed an impressive quarter. In duration terms, shorter-dated maturities performed significantly better than longer-dated equivalents.

Outlook

We expect the downward trend in inflation to continue through the rest of 2023, as energy and food price increases moderate and sluggish GDP weakens the labour market. Nonetheless, UK interest rates are likely to rise further as the BoE continues to focus on bringing inflation under control.

Although the economic data remain very mixed, we still believe that higher rates will lead to a slowdown in the UK, impacting company earnings and leading to some increase in credit rating downgrades and default rates. We still favour sterling credit bonds over government debt as credit spreads remain at reasonably attractive levels. However, recent outperformance means that their relative attractiveness has reduced. We remain focused on identifying companies with strong balance sheets, favouring issues with security and downside protection, and ensuring that portfolios are diversified across issuers and sectors.

The ‘all-in yield’ on sterling investment grade credit (government yield plus credit spread) remains attractive, particularly if inflation starts to fall as we expect. Our sterling credit exposure is generally achieved with a material yield premium to the market, which we feel will support performance both in absolute terms and relative to the market.

All issuers within our sustainable holdings offer a net benefit to society or show ESG leadership. As well as reducing risk, we seek out opportunities that are under-researched e.g., bonds that do not fall into mainstream indices or benchmarks and/or are unrated by ratings agencies. Importantly, the sustainable credit proposition provides access to critical sectors that most investors can’t access via equity markets. Key themes in the funds include social housing, social & environmental infrastructure, community funding (regulated banks and building societies focused on SME and retail lending), financial inclusion & resilience (such as insurance products to support individuals through shocks) and the energy transition. On sustainability grounds, we have no exposure to bonds of oil & gas companies or extractive industries. We are also underweight in the general industrial and consumer goods sectors, and to a lesser extent in consumer services.

Risks and Warnings

Investment Risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit Risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM Techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest Rate Risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Liquidity Risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty Risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Charges from Capital Risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Responsible Investment Risk

The Fund can only invest in holdings that demonstrate compliance with certain sustainable indicators or ESG characteristics. This reduces the number securities in which the Fund can invest and there may as a result be occasions where it forgoes more strongly performing investment opportunities, potentially underperforming non-sustainable funds.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Credit ratings

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund Analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark.

This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Gross redemption yield

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings, weighted by their current value, net of relevant fund management costs and gross of tax.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.

Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.

Top 10 holdings

Top 10 assets held by market value, excluding derivatives and cash.
