# The fund

## Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return (combination of capital growth and income) over the medium term (3-5 years) by investing at least 50% in the shares of UK companies listed on the London Stock Exchange. The Fund's performance target is to outperform, after the deduction of charges, the FTSE All-Share Total Return GBP Index (the "Index") over rolling 3-year periods. The Fund also aims to produce an income in excess of the Index's income over rolling 3-year periods. The Index is regarded as a good measure of the share-price performance of the approximately 600 largest companies on the London Stock Exchange. The Index is considered an appropriate benchmark for the Fund's performance, as the Fund's potential investments will predominantly be included in the Index. In addition to the benchmark for the Fund's performance as noted above (the "Index"), the IA UK Equity Income sector is considered to be an appropriate benchmark for performance comparison.

Benchmark: FTSE All-Share Total Return GBP Index

## Performance commentary

In the first quarter of 2024 the fund slightly lagged the benchmark index, but performed ahead of the IA UK Equity Income peer group median.

Performance was boosted by the holdings in 3i, Intermediate Capital, Nat West and Clarkson, all of whom reported good results or trading statements. The holding in ITV was also strong after the company announced that it was selling its stake in Britbox International to the BBC and using the proceeds received to execute a major share buyback. Not holding Reckitt Benckiser also helped performance as the shares were weak on lacklustre trading and fears of litigation in their infant formula milk business in the USA.

Close Brothers shares were negative for performance after regulators announced a review of financing in the motor market. This review is likely to take some time, but our view is that the immediate impact on Close Brothers shares represented something of an overreaction.

## Fund activity

During the quarter, the portfolio trimmed the holdings in Sage, 3i and RELX and exited the holding in Spirax Sarco after a strong run. We added to the holding in Close Brothers after the shares fell sharply on the FCA news. Hikma reported results in the quarter and the shares were strong on the day of the results, but subsequently drifted back down. We reduced exposure on the strong performance, before rebuilding the position at lower prices.

# Market commentary

## Market overview

A key theme to emerge during the quarter was indication of a more favourable global macro backdrop. Despite some mixed signals, the US economy remains resilient, while Europe and the UK show signs of gradually exiting their recessions. Activity in China also seems to be stabilising. At the same time, core central banks are still confident that the disinflation trend remains intact, despite some recent setbacks in inflation prints. Policymakers have often highlighted that they are in no rush to cut rates – with markets now generally pricing the start of the easing cycles to begin this summer. The Federal Reserve, European Central Bank and Bank of England all left interest rates unchanged over the quarter.

One major development over the quarter is that markets have recalibrated their pricing for expected central bank cuts over this year. At the end of last year, markets were pricing in an aggressive rate cutting cycle, but then swiftly move to temper those forecasts. This re-pricing contributed to negative returns for global government bond markets over the quarter. Despite the belief of many that it was the anticipation of a 'Fed-pivot' that contributed to the rally in equity markets in late 2023, equity markets proved to be immune to this bond market sell-off as global growth and business confidence showed signs of resilience and investors focused on the potential offered by AI.

Data continues to suggest that UK inflation is past its peak and that interest rates could ease at some point this year. This has helped to spur UK equities to a relatively strong quarter, with the FTSE All-Share index returning 3.6%. However, investor expectations continue to be somewhat at odds with policy makers, with many expecting cuts to be both deeper and sooner than the monetary authorities are guiding to.

The quarter saw a large amount of corporate reporting which, while mixed, was on balance reassuring. Results from mining companies, housebuilders, building materials companies and more discretionary retailers were relatively weak while financials and industrials made more upbeat reports.

UK market corporate activity has been a notable feature, with a merger between Barratt and Redrow being announced and DS Smith, Wincanton and Spirent among other companies received bid approaches.

## Outlook

Inflation data has moderated in the quarter and modest interest rate cuts seem likely at some point in the coming months.

Takeover activity is likely to remain a feature in the UK market as, despite the recent rally, the UK equity market remains relatively lowly valued compared to overseas markets. These relatively depressed valuations also continue to prompt many companies to buy back their own shares.

We believe our approach of investing in a broad range of companies who are in control of their own fates, irrespective of market conditions is the right one. As well as looking for durable businesses, a willingness to look through short-term extremes of sentiment and buy stocks when they are out of favour, or take profits when sentiment becomes exuberant should drive longer term performance.

# Risks and Warnings

## **Investment risk**

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

## **EPM techniques risk**

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

## **Counterparty risk**

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

## **Charges from capital risk**

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.
