Royal London Corporate Bond Monthly Income Trust

Quarterly Investment Report

31 March 2024

Quarterly Report

The fund as at 31 March 2024

The purpose of this report is to provide an update on the Royal London Corporate Bond Monthly Income Trust. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

The fund

Fund performance objective and benchmark

The Fund's investment objective is to achieve a consistent monthly income with capital growth over the medium term (3-5 years) by investing at least 80% in sterling-denominated corporate bonds. Both the Markit iBoxx Sterling Non-Gilts All Maturity Total Return GBP Index (the "Index") and the IA Sterling Corporate Bond Sector are considered appropriate benchmarks for performance comparison. The Index is regarded as a good measure of the performance of corporate bonds valued in sterling. This is considered an appropriate benchmark for performance comparison, as many of the Scheme's potential investments will predominantly be included in the Index.

Benchmark: Markit iBoxx Sterling Non-Gilts All Maturity TR Index

Attribution over the quarter

Performance commentary

The portfolio saw a positive return in the period and was ahead of the iBoxx Sterling Non-Gilt index benchmark. The main driver of positive performance was the combination of our sector allocation and stock positioning. At a sector level, our underweight position in supranationals and overweight in both insurance and structured were the main positives as supranationals continued to lag the wider market, having also underperformed in the second half of 2023. Stock selection in insurance and bank bonds also contributed strongly. These positive contributions from bank and insurance stocks were broad-based. Our bias towards subordinated bonds was helpful, particularly AT1s which continued to outperform the wider market. Our exposure to structured bonds was also positive, despite the negative impact of our holding in Thames Water.

Thames Water shareholders had previously announced an intention to inject £750m of equity into the utility by March 2025, with £500m of this anticipated by March 2024. In late March, and following discussions with OfWat, the necessary conditions for that initial injection had not been met. This has been negatively received by credit markets – as was the S&P downgrade to BBB- after the end of the quarter. We continue to believe that liquidity in the operating company remains satisfactory and that the business can continue to fund itself and serve its customers. Equally, until regulatory clarity is received, we expect newsflow to be negative. However, we believe that valuations remain attractive on a fundamental basis, given the strength of protection afforded via the regulated asset base and an expectation that a regulatory determination in June will allow the company to gain shareholder support and avoid a scenario in which taxpayer money is required to support the company.

We believe that the risk in the business remains political in nature, as higher returns to incentivise the significant investment that is required to enhance the network will require price rises for consumers. Nationalisation or a change in the regulatory regime would create wider ramifications for the funding of UK infrastructure and impose significant liabilities on UK taxpayers. We remain in the safest part of the capital structure – operating company debt that is closest to the assets and holdings remain part of a very diversified portfolio of lending decisions.

Performance and activity

Fund activity

New issue activity remained a key focus over the quarter. A notable trend has been the reduction in the new issue premia (the additional yield required to sell new bonds) and at times, book building sizes have looked extraordinary – suggesting huge latent demand. This has led to some caution on our part – we still believe that credit spreads more than compensate credit investors for the risk of default, but are equally aware that demand in certain parts of the market can lead to less favourable pricing.

Financials continued to dominate primary market activity during the quarter. Here we added senior bonds from Metropolitan Life, these bonds ranking alongside policyholders in seniority, in addition we participated in the issues for Barclays senior bonds at around 200bps over equivalent gilts and UK mortgage specialist OSB at a yield of over 8.5%.

Exposure to structured bonds remains a cornerstone of our process and portfolios. Issuance has been somewhat low in recent months, but there were opportunities in the sector during the quarter. Examples included Land Securities and Gatwick Funding, the latter secured on cashflows from the airport. We also added a rare new issue from Telereal – the latter secured on BT telephone exchanges.

Demand from annuity buyers has supported longer-dated high quality bonds. In a number of areas, this has pushed spreads to levels that we feel were unattractive, and we took advantage of the higher demand for these bonds to take profits and recycle into more attractive areas. Our exposure to social housing was an example of this. Here we took profits on Blend and Housing & Care 21, after spreads had tightened to materially lower levels than the wider market. These monies were initially recycled into gilts to maintain duration, but then reinvested into more attractive opportunities in both new issue and secondary market.

We remain cautious around utilities as valuations are generally not as appealing as other areas of the market. However, during the quarter, we felt that valuations in the gas sector, an area we had reduced in recent years, had improved significantly, with credit spreads materially wider than those in the regulated electricity sector. As a result, we were happy to purchase a new issue from the UK's largest gas distribution network Cadent. In the water sector, there has been limited contagion from Thames Water, and we believe it is unlikely that we see removal of support from regulated asset bases across the sector. We added new issues of operating company level bonds from Northumbrian Water and Southern Water, both at attractive yields.

Finally, we added a new 2054 bond from Motability, who help disabled people and their families lease cars, scooters or wheelchairs. We also picked up a new 2036 euro-denominated issue from Dutch telecommunications company KPN. The company has strong ESG credentials, and the bonds came at an attractive yield premium to the market.

Market commentary

Market overview

A key theme to emerge during the quarter was indication of a more favourable global macro backdrop. Despite some mixed signals, the US economy remains resilient, while Europe and the UK show signs of gradually exiting their recessions. Activity in China also seems to be stabilising. At the same time, core central banks are still confident that the disinflation trend remains intact, despite some recent setbacks in inflation prints. Policymakers have often highlighted that they are in no rush to cut rates – with markets now generally pricing the start of the easing cycles to begin this summer. The Federal Reserve, European Central Bank and Bank of England all left interest rates unchanged over the quarter.

One major development over the quarter is that markets have recalibrated their pricing for expected central bank cuts over this year. At the end of last year, markets were pricing in an aggressive rate cutting cycle, but then swiftly move to temper those forecasts. This re-pricing contributed to negative returns for global government bond markets over the quarter. Despite the belief of many that it was the anticipation of a 'Fed-pivot' that contributed to the rally in equity markets in late 2023, equity markets proved to be immune to this bond market sell-off as global growth and business confidence showed signs of resilience and investors focused on the potential offered by AI.

Government yields rose in all the major markets. In the US, 10-year treasury yields rose from 3.88% to 4.21%, while German 10-year bunds similarly saw yields rise from 2.01% to 2.30%. Mirroring this backdrop of rising yields, UK government bonds produced a return of -1.62% (FTSE Actuaries) over the first quarter, with the benchmark 10-year gilt yield rising from 3.54% to 3.94%. The bulk of this move occurred in the first two weeks of January, before largely trading in a range between 4% and 4.2% for the rest of the quarter. The rising yield environment helped short-dated bonds to outperform their longer-dated equivalents.

In contrast to the losses in the government bond market, the sterling investment grade credit market (iBoxx non-gilt index) returned 0.06% over the quarter, with the effect of higher yields mitigated by tighter credit spreads and the higher carry in this area. The shorter duration of the credit market index also helped offset some of the government market headwind. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) tightened from 1.15% to 1.02% (iBoxx). Given the rise in yields, sectors with a greater proportion of long-dated bonds performed poorly, including utilities and social housing. Of the major sectors, supranationals was the worst performing sector, while in financials, the banks and insurance sectors performed well.

Issuance picked up in the first three months of the year compared to the fourth quarter of 2023, but overall supply in key areas such as financials was materially lower than the same period last year. This helped spreads tighten in bank and insurance sector.

Outlook

The rally in bond yields seen late last year, prompted by hopes that falling inflation would lead to relatively rapid and numerous interest rate cuts, was largely unwound in the first two weeks of 2024. This reflects the change in interest rate expectations and the sensitivity of markets to incoming economic data. Looking at market pricing, UK base rates are projected to be around 4.5% at the end of 2024, this is in contrast to the 12-month outlook, where markets were projecting rates below 4%. We expect yields to remain sensitive to economic data, and unless there is a significant deterioration in underlying trends, we expect this to lead to range bound-yields and the opportunity to add/trim duration as markets react to individual data points.

Headline inflation is expected to reach the 2% Bank of England target level in the next few months. However, we are mindful that underlying pressures in the labour market and parts of the services sector mean that headline inflation figures may be somewhat misleading. In addition, data since the start of the year suggests that the UK is growing again – albeit slowly. This trend can be seen in the US and euro zone as well. Overall, the global tone is that rate cuts are not going to come through as quickly as anticipated and that the neutral level may be a bit higher than previously thought.

With bond yields generally higher than they were at the start of the year, and interest rate cuts now closer, we believe that overall government bond yields look attractive. Credit spreads have come in further – and are now looking somewhat tight in longer-dated bonds – but continue to compensate credit investors for the risk of default. From a credit spread perspective we continue to find better value in shorter-dated credit bonds, but with absolute yields at attractive levels we prefer to be broadly neutral in overall duration positioning, with a bias to extend on further rises in yields.

We target – and achieve – a material yield premium over the market level in our sterling credit strategies. We mitigate the risks by maintaining highly diversified portfolios, with a bias towards bonds that offer greater security and downside protection. Our view remains that over the medium term our focus on delivering greater income than the benchmark will generate outperformance.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

Derivative risk

This fund may undertake transactions in derivatives and forward transactions (both on exchange and over the counter (OTC)). These may include interest rate swaps and interest rate futures for the purposes of meeting the investment objective, protecting the risk to capital, duration and credit management, as well as for hedging. While the discerning use of derivatives can be beneficial, derivatives also involve specific risks. These risks relate specifically to market risk, management risk, credit risk, liquidity risk, the risk of mispricing or improper valuation of derivatives and the risk that derivatives may not correlate perfectly with underlying assets, interest rates and indices. The use of derivative instruments may from time to time alter the economic exposure of the fund causing it to deviate significantly from the performance of the market as a whole. The use of these derivatives will be within the parameters allowed for linked funds by the Financial Conduct Authority and Prudential Regulation Authority.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Performance to 31 March 2024

Source: RLAM as at 31 March 2024. All figures are mid-price to mid-price in GBP for the Royal London Corporate Bond Monthly Income Trust (A Inc).

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Attribution

Attribution is shown for the most recent quarter. Attribution figures are based on end of business returns for both the fund and the index whereas performance figures are based on midday returns for the fund and end of business for the index. Therefore the performance will not include market moves between midday when the fund is priced, and end of business when the index is calculated. This may result in a different figure being shown for the quarterly performance vs attribution data.

Credit ratings

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark.

This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Gross redemption yield

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings, weighted by their current value, net of relevant fund management costs and gross of tax.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.

Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.
