Royal London Sustainable Short Duration Corporate Bond Fund

Quarterly Investment Report

31 March 2024

Quarterly Report

The fund as at 31 March 2024

The purpose of this report is to provide an update on the Royal London Sustainable Short Duration Corporate Bond Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

Contents

ROYAL LONDON
ASSET MANAGEMENT

The fund

Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return over the medium term, which should be considered as a period of 3-5 years, by predominantly investing in sterling-denominated corporate bonds, which will primarily be short-duration (5 years or less). Investments in the Fund will adhere to the Investment Manager's ethical and sustainable investment policy. The Fund's performance target is to outperform the ICE Bank of America Merrill Lynch Sterling Non-Gilt (1-5 Years) Total Return (GBP Unhedged) Index (the "Index"), after the deduction of charges, over rolling 5-year periods. The IA Sterling Corporate Bond sector is considered an appropriate benchmark for performance comparison.

Benchmark: ICE BofA 1-5 Year Sterling Non-Gilt Index

Performance commentary

Our credit-only fund Sustainable Short Duration Corporate Bond fund produced a positive absolute return for the quarter, thanks to the impact of narrower credit spreads and the income in the portfolio more than offsetting the impact of rising government bond yields. On a relative basis, the fund outperformed its benchmark index.

The main driver of positive performance was the combination of our sector allocation and stock positioning. At a sector level, our underweight position in supranationals and overweight in both insurance and structured were the main positives as supranationals continued to lag the wider market, having also underperformed in the second half of 2023. Stock selection in insurance and bank bonds also contributed strongly. These positive contributions from bank and insurance stocks were broad-based. Our bias towards subordinated bonds was helpful, particularly AT1s which continued to outperform the wider market. Our exposure to structured bonds was also positive, despite the negative impact of our holding in Thames Water.

Thames Water shareholders had previously announced an intention to inject £750m of equity into the utility by March 2025, with £500m of this anticipated by March 2024. In late March, and following discussions with OfWat, the necessary conditions for that initial injection had not been met. This has been negatively received by credit markets – as was the S&P downgrade to BBB- after the end of the quarter. We continue to believe that liquidity in the operating company remains satisfactory and that the business can continue to fund itself and serve its customers. Equally, until regulatory clarity is received, we expect newsflow to be negative. However, we believe that valuations remain attractive on a fundamental basis, given the strength of protection afforded via the regulated asset base and an expectation that a regulatory determination in June will allow the company to gain shareholder support and avoid a scenario in which taxpayer money is required to support the company. We believe that the risk in the business remains political in nature, as higher returns to incentivise the significant investment that is required to enhance the network will require price rises for consumers. Nationalisation or a change in the regulatory regime would create wider ramifications for the funding of UK infrastructure and impose significant liabilities on UK taxpayers.

Alongside the announcement by Thames Water, Thames Kemble (the holding company for Thames Water) announced that it will not be able to meet the maturity on its £190m April 2024 loan and at the start of April, formally announced a default on the £400m 4.625% 2026 bonds. Whilst significant risks have already been reflected in Holdco bond pricing, the news weighed further on this bond. Our bias remains in the safest part of the capital structure – operating company debt that is closest to the assets – position sizing has reflected the differing risks and holdings remain part of a very diversified portfolio of lending decisions.

Fund activity

All issuers within our sustainable holdings offer a net benefit to society or show ESG leadership. As well as reducing risk, we seek out opportunities that are under-researched e.g., bonds that do not fall into mainstream indices or benchmarks and/or are unrated by ratings agencies. Importantly, the sustainable credit proposition provides access to critical sectors that most investors can't access via equity markets. Key themes in the funds include social housing, social & environmental infrastructure, community funding (regulated banks and building societies focused on SME and retail lending), financial inclusion & resilience (such as insurance products to support individuals through shocks) and the energy transition. On sustainability grounds, we have no exposure to bonds of oil & gas companies or extractive industries. We are also underweight in the general industrial and consumer goods sectors, and to a lesser extent in consumer services.

New issue activity remained a key focus over the quarter. A notable trend has been the reduction in the new issue premia (the additional yield required to sell new bonds) and at times, book building sizes have looked extraordinary – suggesting huge latent demand. This has led to some caution on our part – we still believe that credit spreads more than compensate credit investors for the risk of default, but are equally aware that demand in certain parts of the market can lead to less favourable pricing.

Financials continued to dominate primary market activity during the quarter. Here we added senior bonds from Metropolitan Life, these bonds ranking alongside policyholders in seniority, in addition we participated in a senior new issue for UK mortgage specialist OSB at a yield of over 8.5%. Other notable purchases included Abrdn in the secondary market at a yield to call of over 11% and subordinated short-dated bonds from Nationwide and Legal & General.

Exposure to structured bonds remains a cornerstone of our process and portfolios. Issuance has been somewhat low in recent months, but there were opportunities in the sector during the quarter. Examples included Land Securities and a rare new issue from Telereal – the latter secured on BT telephone exchanges.

Relative value trades are always of interest to for the fund, looking for opportunities to add incremental yield or reduce risk, or both. An example during the quarter was taking profits on Notting Hill Genesis, after strong performance, reinvesting in fellow social housing provider A2Dominion, enhancing credit spread by around 80bps, or a trade slightly shorter in Yorkshire Building Society, where we sold 2028 bonds into 2027s from the same issuer for a small increase in yield.

Market commentary

Market overview

A key theme to emerge during the quarter was indication of a more favourable global macro backdrop. Despite some mixed signals, the US economy remains resilient, while Europe and the UK show signs of gradually exiting their recessions. Activity in China also seems to be stabilising. At the same time, core central banks are still confident that the disinflation trend remains intact, despite some recent setbacks in inflation prints. Policymakers have often highlighted that they are in no rush to cut rates – with markets now generally pricing the start of the easing cycles to begin this summer. The Federal Reserve, European Central Bank and Bank of England all left interest rates unchanged over the quarter.

One major development over the quarter is that markets have recalibrated their pricing for expected central bank cuts over this year. At the end of last year, markets were pricing in an aggressive rate cutting cycle, but then swiftly move to temper those forecasts. This re-pricing contributed to negative returns for global government bond markets over the quarter. Despite the belief of many that it was the anticipation of a 'Fed-pivot' that contributed to the rally in equity markets in late 2023, equity markets proved to be immune to this bond market sell-off as global growth and business confidence showed signs of resilience and investors focused on the potential offered by AI.

Government yields rose in all the major markets. In the US, 10-year treasury yields rose from 3.88% to 4.21%, while German 10-year bunds similarly saw yields rise from 2.01% to 2.30%. Mirroring this backdrop of rising yields, UK government bonds produced a return of -1.62% (FTSE Actuaries) over the first quarter, with the benchmark 10-year gilt yield rising from 3.54% to 3.94%. The bulk of this move occurred in the first two weeks of January, before largely trading in a range between 4% and 4.2% for the rest of the quarter. The rising yield environment helped short-dated bonds to outperform their longer-dated equivalents.

In contrast to the losses in the government bond market, the sterling investment grade credit market (iBoxx non-gilt index) returned 0.06% over the quarter, with the effect of higher yields mitigated by tighter credit spreads and the higher carry in this area. The shorter duration of the credit market index also helped offset some of the government market headwind. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) tightened from 1.15% to 1.02% (iBoxx). Given the rise in yields, sectors with a greater proportion of long-dated bonds performed poorly, including utilities and social housing. Of the major sectors, supranationals was the worst performing sector, while in financials, the banks and insurance sectors performed well.

Issuance picked up in the first three months of the year compared to the fourth quarter of 2023, but overall supply in key areas such as financials was materially lower than the same period last year. This helped spreads tighten in bank and insurance sector.

Outlook

The rally in bond yields seen late last year, prompted by hopes that falling inflation would lead to relatively rapid and numerous interest rate cuts, was largely unwound in the first two weeks of 2024. This reflects the change in interest rate expectations and the sensitivity of markets to incoming economic data. Looking at market pricing, UK base rates are projected to be around 4.5% at the end of 2024, this is in contrast to the 12-month outlook, where markets were projecting rates below 4%. We expect yields to remain sensitive to economic data, and unless there is a significant deterioration in underlying trends, we expect this to lead to range bound-yields and the opportunity to add/trim duration as markets react to individual data points.

Headline inflation is expected to reach the 2% Bank of England target level in the next few months. However, we are mindful that underlying pressures in the labour market and parts of the services sector mean that headline inflation figures may be somewhat misleading. In addition, data since the start of the year suggests that the UK is growing again – albeit slowly. This trend can be seen in the US and euro zone as well. Overall, the global tone is that rate cuts are not going to come through as quickly as anticipated and that the neutral level may be a bit higher than previously thought.

With bond yields generally higher than they were at the start of the year, and interest rate cuts now closer, we believe that overall government bond yields look attractive. Credit spreads have come in further – and are now looking somewhat tight in longer-dated bonds – but continue to compensate credit investors for the risk of default. From a credit spread perspective we continue to find better value in shorter-dated credit bonds, but with absolute yields at attractive levels we prefer to be broadly neutral in overall duration positioning, with a bias to extend on further rises in yields.

We target – and achieve – a material yield premium over the market level in our sterling credit strategies. We mitigate the risks by maintaining highly diversified portfolios, with a bias towards bonds that offer greater security and downside protection. Our view remains that over the medium term our focus on delivering greater income than the benchmark will generate outperformance.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Liquidity risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Charges from capital risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Responsible investment risk

The Fund can only invest in holdings that demonstrate compliance with certain sustainable indicators or ESG characteristics. This reduces the number securities in which the Fund can invest and there may as a result be occasions where it forgoes more strongly performing investment opportunities, potentially underperforming non-sustainable funds.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Credit ratings

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark.

This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

Gross redemption yield

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings, weighted by their current value, net of relevant fund management costs and gross of tax.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.

Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.

Top 10 holdings

Top 10 assets held by market value, excluding derivatives and cash.
