# **Royal London Short Term Fixed Income Enhanced Fund**

Quarterly Investment Report

**31 December 2025**

# Quarterly Report

## The fund as at 31 December 2025

The purpose of this report is to provide an update on the Royal London Short Term Fixed Income Enhanced Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

## Duration profile

## Performance commentary

Money market rates fell in line with the Bank of England rate cut in December at the short end. Longer maturities held their levels, ending the quarter little changed as there were no material changes to longer-term BoE expectations over the quarter. Money market returns, using SONIA as a proxy, remained attractive.

Performance was positive over the quarter compared to the SONIA benchmark. At a portfolio level, we had built up a yield premium to the benchmark, and the diversification of the fund meant that when the Bank of England cut interest rates by 0.25%, we saw a smaller impact on portfolio yield. Our corporate bond exposure was again the main driver of returns, with short-dated credit providing strong returns over the quarter, particularly in financials, but with notable contributions from secured bonds such as Telereal – bonds secured on lease payments on BT telephone exchanges – and Heathrow.

Our money market exposure and covered bond holdings both contributed strongly to returns over the quarter. The impact of our covered bond exposure was positive: after the small hit to confidence in the summer of 2025 when the UK's Prudential Regulation Authority proposed changes to treatment of non-UK bank covered bonds, these had performed well in the third quarter and this continued into the final three months of the year.

We continued to use short-dated gilts to maintain duration and benefit from the higher yields on offer as the market continued to change expectations of future rate moves. When short-dated yields are more volatile, this is an effective way to benefit from this volatility given these are liquid and cost-efficient.

# Performance and activity

## Fund activity

Activity was spread across traditional money market areas such as overnight deposits, certificates of deposit and treasury bills, as well as covered bonds and high quality short-dated corporate bonds. At the margin, we had a bias towards Canadian names – these not subject to bail-in and hence where we could access these at similar yields to (bailable) UK names, we were happy to buy. We also looked at Australian names, these being part of a mature sector and helped by a strong underlying economy.

For money market exposure, we generally focus on short paper. Core activity focused on three-month CDs, but we did look to add longer dated paper on a case-by-case basis where we thought this offered value given our expectations for BoE activity in 2026. Hence we added selectively to six-month and one-year paper from favoured names such as Cooperative Rabobank, Nordea, National Bank of Canada and Bank of Montreal. We also added three-month t-bills late in the period when we felt that the yield on these looked attractive relative to CDs considering the lower risk attached to these instruments.

Covered bonds from favoured issuers are always attractive for the fund, and remain a significant part of the portfolio. Issuance was relatively low, although we did look to add to short-dated issues in the secondary market where possible, being very selective after recent spread tightening. Over the quarter we added new issues from National Australia Bank, DBS Bank and United Overseas Bank, all at significant yield premia to SONIA, as well as Commonwealth Bank of Australia in the secondary market.

We also looked for short-dated high quality bank bonds to support yield generation. Activity was more focused on the secondary market where we found better opportunities, including adding senior bank bonds from ING Group, Lloyds TSB and Santander. But we also find strong diversification opportunities at attractive yields, examples being WODS transmission – bonds secured on cashflows for use of the transmission infrastructure for the West of Duddon Sands Wind Farm – and Great Rolling Stock – secured on leasing flows for rolling stock.

# Market commentary

## Market overview

Markets were focused on the US during the quarter, with rate cuts from the Federal Reserve bookending the longest US Federal Government shutdown in history. The decision was accompanied by language suggesting a pause after three cuts in the final four months of 2025. In the euro zone, the European Central Bank left rates unchanged – with inflation concerns causing reluctance to cut further after four cuts in the first half of 2025. The Bank of England (BoE) cut rates from 4% to 3.75%, the sixth cut since mid-2024 from the recent peak of 5.25%. The BoE noted that inflation was still a concern (reflected in a 5-4 vote) but concerns over downside risks including an unemployment rate that has edged to its highest rate since the Covid pandemic.

Risk assets closed the year strongly. After the sharp fall in the wake of the Trump tariff announcement in early April, global equity markets generally ground higher, including during the fourth quarter, helped by ongoing optimism over AI as well as supportive corporate earnings. For the year as a whole, there was strong performance from all major markets – the US, Europe, UK and Japan – with the US lagging in common currency terms after the US dollar weakened significantly. Global credit has benefited from falling interest rates and the strong corporate backdrop leading to tighter credit spreads. Government bond yields were mixed, with US and German government bond yields edging higher, while UK yields moved lower on hopes that the November budget announcement would be gilt-friendly.

Benchmark 10-year gilt yields fell from 4.70% to end at 4.55%, meanwhile UK 30-year gilt yields took a step back from their highest levels in almost 30 years seen in the summer. In the US, 10-year treasury yields rose slightly to 4.14% from 4.13% at the end of September but seen volatility in the interim. The German 10-year bund yield was 2.82% at the end of the fourth quarter, rising from 2.67% three months prior.

The Bank of England rate cut in December was the focus for money market rates over the quarter. Having started the period at 3.97%, SONIA fell to 3.72% after the cut, compared to 4.70% at the start of 2025. Two-year gilts, often seen as a proxy for market expectations of BoE rates, started the quarter at 3.99%, and fell to 3.71% as investors became more confident that the November budget would be supportive of gilts.

## Outlook

We began 2025 expecting policy rates to fall and inflation to ease but stay sticky – and that broad call held. Major central banks moved further into their easing phases, while inflation moderated from its peaks without returning to pre pandemic norms. Where we misjudged was the pace of disinflation in the second half. The global economy proved more resilient than consensus, with wage dynamics and protectionist trade policies slowing the descent of core inflation.

The UK economy continues to face a challenging backdrop. Fiscal pressures are significant, resulting in the government announcing further tax increases at the Budget in late November. It has been easy to present a gloomy case for the UK economy given the soft jobs market, headlines around ‘fiscal black holes’, persistent inflation, and a BoE that, for much of the period since the summer, sounded hesitant to cut rates further. While there is broad consensus that rates will fall further – a view we share – there is quite a lot of uncertainty about how far and by when. The Bank is looking to be data-dependent, but there is little obvious sign as to whether growth will pick up at all, and to what extent inflation can fall to or below target.

For our liquidity funds, we look for value on the money market curve relative to market expectations. At present, we see little obvious attraction in broadly extending duration as this would mean higher interest rate risk but without an appropriate reward for taking that risk – and during 2025 we demonstrated that significant long or short positioning is not needed to deliver outperformance. While we target an attractive yield in the portfolios, we are mindful of liquidity and security as well, therefore preferring to look for value on a case-by-case basis instead. We continue to believe that the overall yields in our liquidity and short-term fixed income funds remain attractive for investors.

# Risks and Warnings

## Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

## Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

## EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

## Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

## Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

## Government and public securities risk

The Fund can invest more than 35% of net assets in different Transferable Securities and Money Market Instruments issued or guaranteed by any EEA State, its local authorities, a third country or public international bodies of which one or more EEA States are members.

## Inflation risk

Where the income yield is lower than the rate of inflation, the real value of your investment will reduce over time.

# Glossary

## Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

## Bonds

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

## Covered bonds

Bonds or notes that are backed by cash flows from mortgages or other debt.

## Derivatives

A financial instrument whose price is dependent upon or derived from one or more underlying asset.

## Efficient Portfolio Management (EPM) techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. The use of these instruments may expose the Fund to volatile investment returns and increase the volatility of the net asset value of the Fund. EPM techniques may involve the Fund entering into transactions with counterparties where there may be a risk of counterparty default. The Fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations.

## Floating rate notes

Bonds that pay a variable rate of interest. The interest rate is tied to a benchmark and adjusted periodically.

## Money market instruments

Investments that pay interest, have a short duration and are designed to maintain a stable value.

## Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

## Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

## Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

## Redemption yield

The weighted average rate of discount at which the future obligations of interest and capital payments of each of the fund's holdings equates to its current price, gross of relevant fund management costs and gross of tax.

## Weighted average maturity

The average length of time to maturity of all underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to the money market rate, rather than the time remaining before the principal value of the security must be repaid.
