Royal London Short Duration Credit Fund

Quarterly Investment Report

31 December 2025

Quarterly Report

The fund as at 31 December 2025

The purpose of this report is to provide an update on the Royal London Short Duration Credit Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

The fund

Fund performance objective and benchmark

The Fund aims to provide a return greater than that of the ICE Bank of America Merrill Lynch 1-5 Year Sterling Non-Gilt Total Return Index over rolling 3-year periods, through a combination of capital growth and income, after the deduction of charges.

Fund value

	Total £m

Attribution over the quarter

Performance commentary

The fourth quarter saw positive returns from sterling credit investment grade markets (iBoxx). Against this, the fund outperformed the index. Performance was comfortably ahead of the index for 2025 as a whole.

Duration was a negative story for the fourth quarter. We remain focused on bottom-up credit selection, rather than taking positions based on overall market yield levels. While our government bond strategies have been long duration, our credit positioning is more a function of the attractive opportunities in mid and longer-dated bonds rather than a view on yields.

Sector positioning was positive over the quarter. Our longstanding underweight in supranational bonds helped performance as the lower perceived risk of the supranational sector contributed to it again lagging the wider market.

Stock selection effects were positive during the quarter. This was particularly noticeable within our banking and financials sector holdings, where lower tier 2 bonds outperformed. Examples include our holding in Credit Agricole bonds. AT1 and tier 1 performance was mixed in general, but with strong returns from Lloyds. Insurance stock selection was also helpful. Again, lower tier 2 bonds were the strong performers over the quarter, particularly bonds from Aviva and M&G.

Aggregated Micro Power was a small positive for the quarter, but a much larger positive over the year as a whole. AMP is an energy company focused on biomass boilers and flexible electricity generation. These bonds were repaid at par during the quarter, providing a modest uplift to performance. The bonds are unrated, meaning many other credit investors will have overlooked the opportunity. Our credit research was positive on the issue, and it was providing capital to a business that is helping with the switch to more sustainable energy as well as providing an 8% coupon while we held this. It is a small but notable example of how our approach can unearth opportunities others overlook.

Fund activity

Banks and financials remain the largest part of the index. Our portfolios have a long-standing high level of exposure to the sector as we believed that credit spreads looked very attractive for the risk taken. Following two years of outperformance, the overall valuation picture looks less compelling than it did, leading to lower exposure over time. However, we continue to find attractive opportunities. Examples over the quarter included senior bonds from Commerzbank – which is not a major issuer in the sterling market and therefore offered an attractive spread and diversification benefits. We also added a senior new issue from Dutch banking giant ING and a tier 2 new issue from Australian & New Zealand Banking and specialist insurer Pension Insurance Corporation – the latter a leader in the UK pension risk transfer market – where we saw attractive yield premia to the market.

We also added a number of subordinated 'legacy' bonds that offered attractive yields and scope for early repayment as banks and insurers look to increase capital efficiency. Examples during the quarter included tier 1 bonds from HSBC and Commerzbank.

Structured bonds remain a key exposure for the portfolio. With overall credit spreads tightening over the year, we were happy to take advantage of new issue opportunities to add secured bonds that often offered more attractive spreads than similar unsecured bonds. During the quarter, we added Vantage Data Centers, a securitisation of real estate and tenant lease payments from two operating wholesale data centres in Newport. This deal offered an attractive loan to value (LTV), has highly rated tenants, and pays an attractive credit spread – notably higher than unsecured bonds from large technology companies. We also added AAA rated floating rate bonds from DBMS, a logistics CMBS backed by 64 properties across the UK with a diversified tenant base, that came to market at spread of 128bps over SONIA.

Water company bonds have generally done well in 2025. The water industry still offers attractive yield premia compared to other regulated utilities, despite the reduced risk following the completion of the regulator review in 2025. We added a new issue from Southern Water during the period, the company recently strengthened with £900m of equity support since summer 2025. In the secondary market, we added South East Water.

While we retain exposure to financials, secured bonds and social housing, we look for issues in other sectors that add diversification and resilience to our portfolios. During the quarter we added a new issue from US communications giant Verizon, these hybrid bonds offering a yield of over 6%. We also added bonds from International Distribution Services, parent company of Royal Mail, these trading at an above-market yield and offering a strong lending structure. We also added a new issue from National Air Traffic Control Services, the UK's leading provider of air traffic control services.

Fund Engagement

Engagement definition

Engagement is active dialogue with investee companies (or other entities). There are two types: engagement for information, which is dialogue as part of investment research or ongoing monitoring, without specific objectives for change, and engagement for change, which is purposeful dialogue to influence positive change, with defined objectives and demonstrable outcomes.

Engagements

Engagement activity	Fund 3 months	Fund 12 months
Number of entities engaged	14	30
Number of engagements	20	72

This is an estimate. Some engagements at the issuer level may not have been attributed to the specific bond held in the fund, resulting in a lower number of engagement activities.

Total engagements by theme and topic

Biodiversity	2
Climate	11
Climate - Transition Risk	10
Climate - Physical Risk	1
Environment	4
Governance	3
Corporate Governance	2
Remuneration	1
Social & Financial Inclusion	5
Just transition	4
Social & Financial Inclusion	1
Technology, Innovation & Society	1
Cybersecurity	1

The numbers of engagements and themes/topics discussed may differ where a single engagement covers multiple themes/topics.

Engagement focus

Firm-wide engagement activity is centred around six themes which we have identified in consultation with our clients. These are: climate change; nature and biodiversity; health; governance and corporate culture; social and financial inclusion; innovation, technology and society. Portfolio level engagements are not thematic and are focussed on issues specific to managing the portfolio and meeting the investment objective.

Engagement data represents all engagements undertaken at both firm and portfolio level across Royal London Asset Management, and may not be limited to those undertaken solely for the purpose of managing the fund.

Fund Engagement

Engagement outcomes

HSBC Holdings plc – Just Transition

Purpose:

HSBC Holdings plc, a global bank, was engaged as part of our long-running engagement with banks on just transition, seeking for it to integrate social considerations into its Net Zero transition plan.

Outcome:

HSBC is updating its Net Zero transition plan and benchmarking peers to improve just transition disclosures. The bank recognised deficiencies in managing climate-related human rights risks and sector-specific social impacts, but emphasised ongoing measures, such as the implementation of enhanced vulnerability standards and various financial inclusion initiatives. HSBC emphasised challenges in retrofitting liability and Use of Proceed loans in the retail mortgage market. Following our meeting, we will review our draft assessment and share it with the bank to encourage improved disclosure and integration of social considerations.

Lloyds Banking Group plc – Just Transition

Purpose:

Lloyds Banking Group plc (Lloyds), a UK-based financial institution, was engaged as part of our long-running engagement with banks on just transition. We sought the integration of social considerations into the company's decarbonisation strategy.

Outcome:

Lloyds continues to integrate just transition across its strategy, committing £1 billion to its Regional Impact Fund to address regional inequality and drive inclusive economic growth. The bank showcased partnerships with the North East Combined Authority and Office of Investment to channel private investment into green infrastructure. It also expanded its 'Eco Home Reward' scheme, offering up to £2,000 cashback for energy efficiency measures, returning over £2 million to customers in 2025. Lloyds is working with Octopus Energy to reduce heat pump installation wait times and exploring property-linked financing. Before implementing mortgage policy changes, Lloyds conducted analysis to ensure alignment with just transition principles. We will continue this engagement to monitor disclosure improvements.

Fund Engagement

Engagement outcomes

Volkswagen AG – Net Zero

Purpose:

Volkswagen AG, a global automotive manufacturer, was engaged to review its climate strategy and commitments under the Net Zero Stewardship Programme.

Outcome:

Volkswagen's climate alignment improved following a 5% emissions reduction, though the company has not set up yet a target for Scope 3 Category 1 emissions (indirect emissions from purchased goods and services). Battery electric vehicle sales are expected to reach 11% in 2025, supported by affordable models and strategic partnerships in China. The company is preparing to meet the new EU's 2035 requirement for a 90% reduction in fleetwide emissions by transitioning towards electric and other low-emission vehicle production. Volkswagen also disclosed workforce training initiatives under its just transition approach. We will continue engagement to encourage stronger Scope 3 targets and progress on the transition to zero-emissions vehicles.

Yorkshire Water – Environment

Purpose:

Yorkshire Water, a UK water utility, was engaged to assess its climate resilience and pollution control strategies.

Outcome:

Yorkshire Water is investing £1.5 billion to upgrade storm overflow systems and implement nature-based solutions such as wetlands and tree planting to improve water quality and biodiversity. The company is also deploying ~20,000 sewer monitors and intelligent pumps to prevent failures, supported by a broader digital transformation programme and investment in green skills for its workforce. On financing, Yorkshire Water is focusing on inflation-linked debt and reducing gearing (a measure of financial leverage) to maintain stability. We will continue engagement to monitor progress on biodiversity initiatives and resilience disclosures.

Market commentary

Market overview

Markets were focused on the US during the fourth quarter, with rate cuts from the Federal Reserve bookending the longest US Federal Government shutdown in history. The decision was accompanied by language suggesting a pause after three cuts in the final four months of 2025.

In the euro zone, the European Central Bank left rates unchanged – with inflation concerns causing reluctance to cut further after four cuts in the first half of 2025. The Bank of England (BoE) cut rates from 4% to 3.75%, the sixth cut since mid-2024 from the recent peak of 5.25%. The BoE noted that inflation was still a concern (reflected in a 5-4 vote) but concerns over downside risks include unemployment edging to its highest rate since the Covid pandemic.

Risk assets closed the year strongly – the third consecutive year of double digit returns for equities. After the sharp fall in the wake of the Trump tariff announcement in early April, global equity markets generally ground higher, including during the fourth quarter, helped by ongoing optimism over AI as well as supportive corporate earnings. For the year as a whole, there was strong performance from all major markets – the US, Europe, UK and Japan – with the US lagging in common currency terms after the US dollar weakened significantly.

Government bond yields were mixed, with US and German government bond yields edging higher, while UK yields moved lower on hopes that the November budget announcement would be gilt-friendly. Gilts rallied as Budget news broke but the initial volatility was absorbed during the course of the day, with expected tax hikes backloaded and some action to curb short-term inflation announced.

Benchmark 10-year gilt yields fell from 4.70% to end at 4.55%, meanwhile UK 30-year gilt yields took a step back from their highest levels in almost 30 years seen in the summer. In the US, 10-year treasury yields rose slightly to 4.14% from 4.13% at the end of September but seen volatility in the interim. The German 10-year bund yield was 2.82% at the end of the fourth quarter, rising from 2.67% three months prior.

The sterling investment grade credit market (iBoxx non-gilt index) returned 2.58% over the period under review. Gilts outperformed credit over the quarter, helped by the longer duration of this market in a quarter where UK government bond yields edged lower. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) was relatively unchanged over the period. Spreads began and ended the quarter at 0.77% (iBoxx), compared to the narrowing of spreads seen during the second and third quarters after the widening seen in the first quarter. Sector returns were generally positive, led by banks, insurance and structured bonds.

Outlook

Sterling credit markets have shown remarkable resilience in 2025, weathering external noise and tightening spreads. Despite elevated interest rates and persistent volatility, sterling investment grade credit provided strong returns in 2025. Many of the same uncertainties we were looking at 12 months ago remain in place today – along with some new ones: US policies on tariffs, a new Fed chair and engagement on conflicts such as Gaza and Ukraine remain unpredictable; global inflation is falling but not as fast as economists would like; more central bank rate cuts are expected but there is little consensus around the quantum of these; vast amounts of money are being poured into AI with little attention on the return on that capital.

Sterling credit spreads have continued to tighten through 2025 and are now at levels last seen before the Global Financial Crisis. We see this as logical: defaults are low, company balance sheets are generally healthy, and investors have been buying credit because of attractive yields. At a fundamental level, we still believe that credit spreads over-compensate investors for default risk, and that the all-in yield on sterling credit remains attractive. Furthermore, we continue to find attractive investment opportunities, partly through the new issue market but also by focusing on exploiting market inefficiencies. By focusing on bottom-up analysis, we continue to build overall portfolios that we believe offer attractive risk / return profiles with above-market yields.

While near-term absolute performance is likely to be heavily influenced by movements in the yields of underlying government bond markets, we expect relative performance to continue to be meaningfully influenced by the comparative exposure to supranational bonds and to more economically sensitive or cyclical industrial and consumer sectors. However, we believe that continued emphasis on diversification and our bias towards secured and collateralised debt to help mitigate default risk, as well as our focus on income, will continue to support returns as has been the case through the present environment of volatile yields.

We remain confident that we can further achieve an attractive yield premium in our sterling credit portfolios, as we look to exploit market inefficiencies, with long-standing belief such as the undervaluing of security now augmented by newer inefficiencies such as the 'mechanised' approaches used by annuity providers, Exchange Traded Funds and passive funds that treat credit as a homogenous commodity area, buying in a relatively price insensitive manner. Experience suggests that the more credit is treated as a commoditised asset class, the greater the level of inefficiencies that an active manager can exploit.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Liquidity risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Charges from capital risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Source: RLAM as at 31 December 2025. All figures are mid-price to mid-price for the Royal London Short Duration Credit Fund Z Inc GBP share class.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Attribution

Attribution is shown for the most recent quarter. Attribution figures are based on close of business returns for both the fund and the index whereas performance figures are based on midday returns for the fund and close of business for the index. Therefore the performance will not include market moves between midday when the fund is priced, and close of business when the index is calculated. This may result in a different figure being shown for the quarterly performance vs attribution data.

Bonds

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

Credit ratings

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

Fund analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark. This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

Redemption yield

The weighted average rate of discount at which the future obligations of interest and capital payments of each of the fund's holdings equates to its current price, gross of relevant fund management costs and gross of tax.

Rolling 5-Year Period

A rolling 5-year period is any period of five years, no matter which day you start on.

Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.

Total return

A total return is a combination of capital growth and income. Capital growth is defined as the rise in an investment's value over time and income as the payment an investment generates, such as dividends or bond coupons.
