For professional clients only, not suitable for retail clients. This is a marketing communication.

This fund uses the Sustainability Focus label which is for funds that invest mainly in assets that focus on sustainability for people or the planet.

Sustainability Focus

Royal London Sustainable Corporate Bond Trust

Quarterly Investment Report

31 December 2025

ROYAL LONDON ASSET MANAGEMENT

Quarterly Report

The fund as at 31 December 2025

The purpose of this report is to provide an update on the Royal London Sustainable Corporate Bond Trust. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

Contents

The fund

Fund performance objective and benchmark

The Fund's financial objective is to achieve a total return over the medium term, which should be considered as a period of 3-5 years. The Fund's sustainability objective is to invest in companies or issuers that make a positive contribution to one or more of the "Sustainability Themes" (Clean, Healthy, Safe, Inclusive), through their products or services as determined by the Investment Adviser using its "Sustainability Standard".

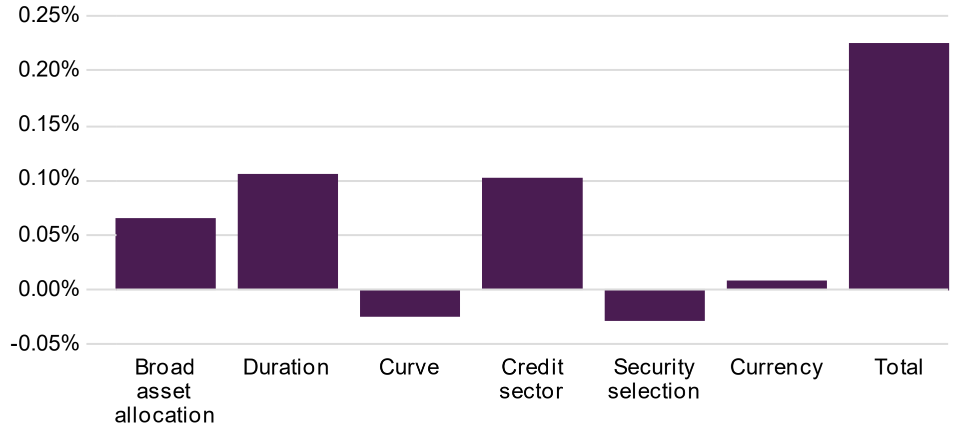
Attribution over the quarter



Performance commentary

The fund's sustainability objective is to invest in companies that make a positive contribution to one or more of the Sustainability Themes – clean, healthy, safe, and inclusive. Our sustainable credit funds combine our long-standing credit philosophy with our heritage in sustainable investing, and most notably provide access to critical sectors that are not available via equity markets.

These areas can include non-for-profit UK housing associations providing homes at social and affordable rents, building societies providing basic financial services to households, and privately held regulated utilities enabling the transition to a lower-carbon economy. Our sustainable funds have no exposure to bonds of oil & gas companies or extractive industries. We are also underweight in the general industrial and consumer goods sectors, and to a lesser extent in consumer services.

The fourth quarter saw positive returns from sterling credit investment grade markets (iBoxx). Against this, the fund marginally underperformed the index. Performance was comfortably ahead of the index for 2025 as a whole.

Duration was a positive story for the fourth quarter. We remain focused on bottom-up credit selection, rather than taking positions based on overall market yield levels. While our government bond strategies have also been long duration, our positioning is more a function of the attractive opportunities in mid and longer-dated bonds rather than a view on yields. This was positive over the quarter.

Sector positioning was positive over the quarter. Our overweight in insurance bonds was helpful as the sector performed strongly, as was our exposure to the structured sector, which provides exposure to several areas with strong sustainability credentials. Our longstanding underweight in supranational bonds also helped performance as the lower perceived risk of the supranational sector contributed to it again lagging the wider market.

Fund activity

Stock selection effects were broadly flat during the quarter. Selection within social housing was positive, including thanks to holdings in Hastoe, a housing association operating in rural communities in the south of England. With Hastoe's bonds being sub-benchmark size, this is an example of our focus on under-researched areas of the market as a key element of idea generation.

Security selection was also positive in the insurance sector, where holdings in M&G also performed well. Detractors during the month include transportation business Mobico, albeit this remains a small part of a highly diversified portfolio.

During the quarter we also saw the redemption of Aggregated Micro Power (AMP) bonds, which contributed positively to both quarterly and yearly performance. We have been long-term lenders to AMP, a small UK energy company focused on biomass boilers and flexible electricity generation. These bonds were repaid at par during the quarter, providing a modest uplift to performance. The bonds were unrated, serving as another example of our focus on overlooked areas off the market. In addition to the strong sustainable credentials, bonds provided an 8% coupon and our lending position also benefitted from security over assets.

Financials, including both banks and insurance, remain a large part of the index. Our portfolios have a long-standing exposure to these sectors, reflecting our view on the attractiveness of credit spreads relative to fundamental risks. Following two years of outperformance, the overall valuation picture looks less compelling than it did, leading to lower exposure over time. However, we continue to find attractive opportunities.

Examples over the quarter included senior bonds from Commerzbank – which is not a major issuer in the sterling market and therefore offered an attractive spread and diversification benefits. We also added a senior new issue from Dutch banking giant ING and a subordinated new issue from international healthcare provider BUPA at a very attractive spread, also benefitting from the tender for existing 2026 bonds from the same issuer.

We also added a tier 2 new issue from specialist insurer Pension Insurance Corporation – the latter a leader in the UK pension risk transfer market – where we saw attractive yield premia to the market.

We also added a number of subordinated 'legacy' bonds that offered attractive yields and scope for early repayment as banks and insurers look to increase capital efficiency. Examples during the quarter included tier 1 bonds from HSBC and Commerzbank.

Performance and activity

Fund activity (continued)

With overall market levels tighter after a strong 2025, we have looked at areas that would usually be seen as offering lower value. An example in the government guaranteed area was Saltaire Finance, a special purpose vehicle established to support the UK's Affordable Homes Guarantee Scheme by issuing secured bonds and on-lending the proceeds to registered housing providers for affordable housing development and energy efficiency improvements. The bonds came to market at an attractive spread relative to both market levels and the presence of the UK Government guarantee.

Structured bonds remain a key exposure for the portfolio. With overall credit spreads tightening over the year, we were happy to take advantage of new issue opportunities to add secured bonds that often offered more attractive spreads than similar unsecured bonds. During the quarter, we added Vantage Data Centers, a securitisation backed by two data centres in Newport. This deal offered an attractive loan to value (LTV), has highly rated tenants, and pays an attractive credit spread – notably higher than unsecured bonds from large technology companies.

We also added AAA rated floating rate bonds from DBMS, a logistics CMBS backed by 64 properties across the UK with a diversified tenant base, that came to market at spread of 128bps over SONIA.

Social housing also offers security over property assets, as well as fulfilling an important societal need. We added a new issue from Blend Funding – a housing aggregator that helps smaller housing associations access debt markets efficiently. The bonds were secured, and offered an attractive spread over gilts.

Water company bonds have generally done well in 2025. The water industry still offers attractive yield premia compared to other regulated utilities, despite the reduced risk following the completion of the regulator review in 2025. In the secondary market, we added South East Water and Yorkshire Water. Both offer attractive spread, but Yorkshire Water bonds were available at a very attractive low cash price.

While we retain exposure to financials, secured bonds and social housing, we look for issues in other sectors that add diversification and resilience to our portfolios. During the quarter we added a new issue from US communications giant Verizon, these hybrid bonds offering a yield of over 6%.

We also added bonds from International Distribution Services, parent company of Royal Mail, these trading at an above-market yield and offering a strong lending structure.

Fund breakdown

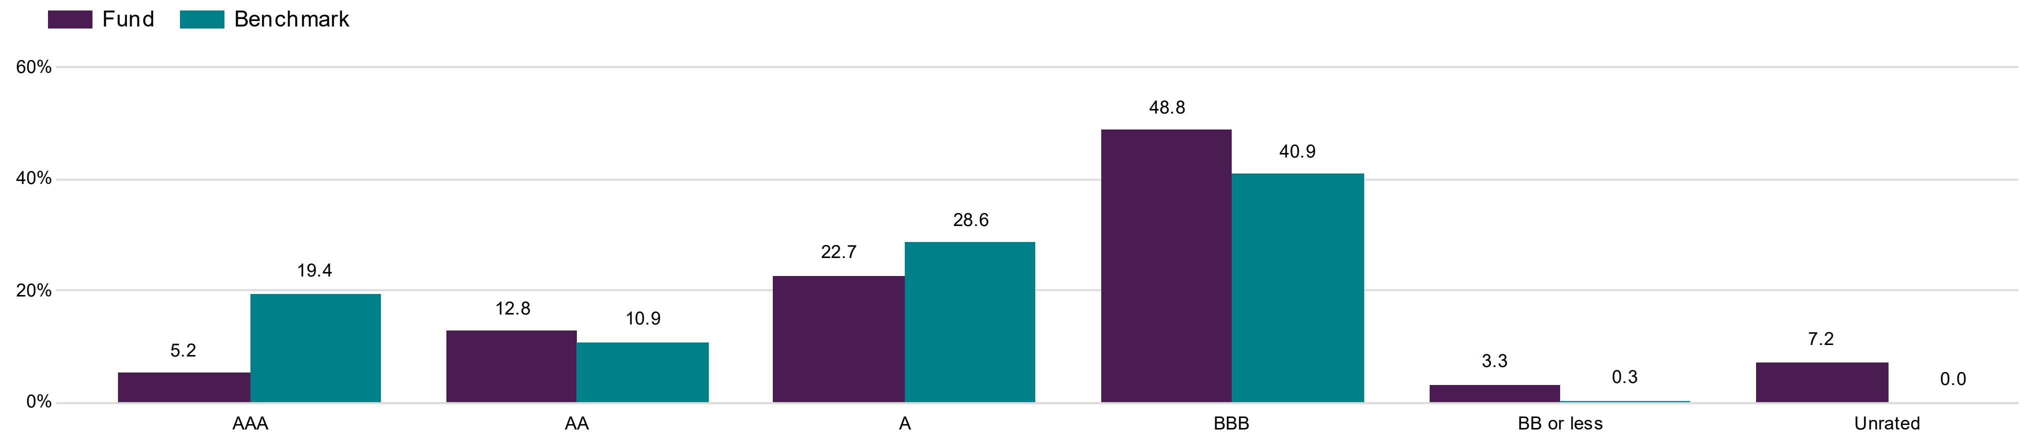
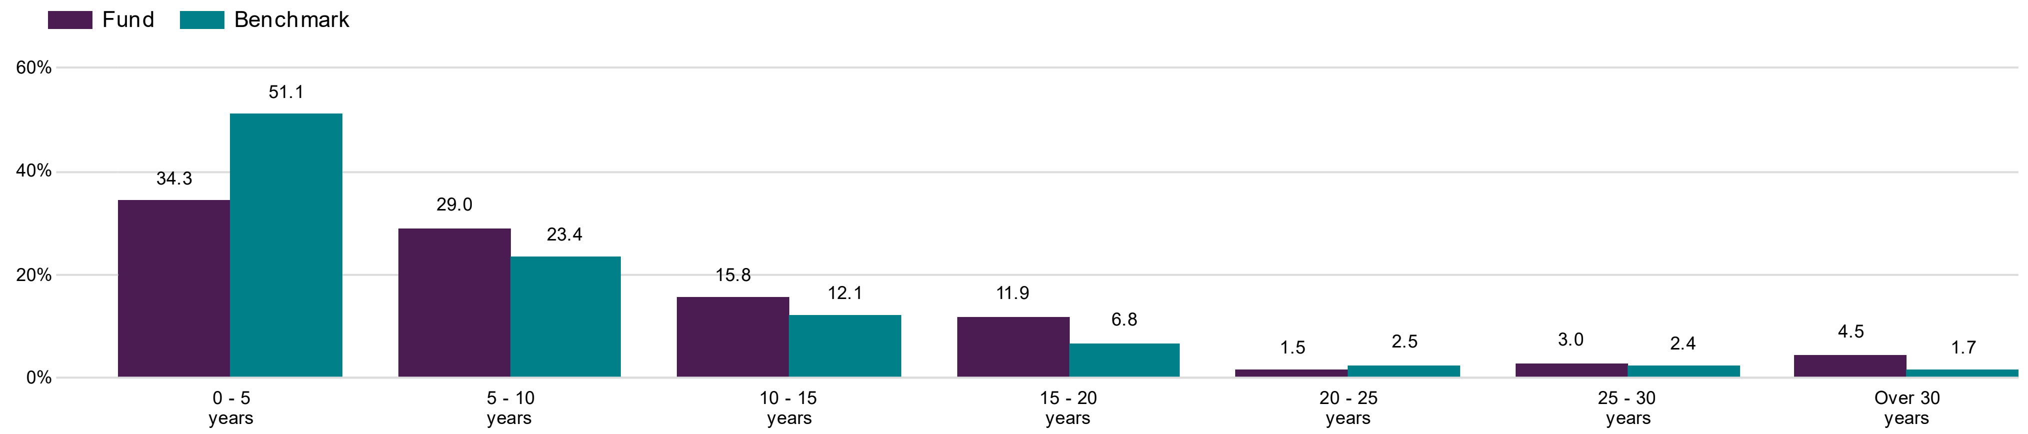
Credit ratings



Fund breakdown

Maturity profile



Characteristics and climate

Sustainability approach

The Fund's sustainability objective is to invest in companies or issuers that make a positive contribution to one or more of the "Sustainability Themes" (Clean, Healthy, Safe, Inclusive), through their products or services as determined by the Investment Manager using its "Sustainability Standard". The Sustainability Standard requires 50% of a company or issuer's revenues to be derived from product or services aligned to one or more of the four Sustainability themes.

Overall, at least 70% of the Fund is invested in sustainable companies or issuers. Up to 30% may be held in non-sustainable companies or issuers that do not conflict with the sustainability objective for any of the four sustainability themes of the Fund.

Fund exclusions

Exclusion criteria that make sure a fund does not invest into a specific service or product. Royal London Asset Management has a controversial weapons exclusion across all investments.

Pornography production	✓
Non-health animal testing	✓
Armament manufacturing	✓
Fossil fuel extraction	✓

SBTi Near-Term targets set	13.80	17.34	(20.46)

Fund Engagement

Engagement definition

Engagement is active dialogue with investee companies (or other entities). There are two types: engagement for information, which is dialogue as part of investment research or ongoing monitoring, without specific objectives for change, and engagement for change, which is purposeful dialogue to influence positive change, with defined objectives and demonstrable outcomes.

Engagements

Engagement activity	Fund 3 months	Fund 12 months
Number of entities engaged	9	20
Number of engagements	14	47

This is an estimate. Some engagements at the issuer level may not have been attributed to the specific bond held in the fund, resulting in a lower number of engagement activities.

Total engagements by theme and topic

Biodiversity	**1**
Climate	**5**
Climate - Transition Risk	4
Climate - Physical Risk	1
Environment	**4**
Governance	**2**
Corporate Governance	2
Social & Financial Inclusion	**4**
Just transition	3
Social & Financial inclusion	1
Technology, Innovation & Society	**1**
Technology & Society	1

The numbers of engagements and themes/topics discussed may differ where a single engagement covers multiple themes/topics.

Engagement focus

Firm-wide engagement activity is centred around six themes which we have identified in consultation with our clients. These are: climate change; nature and biodiversity; health; governance and corporate culture; social and financial inclusion; innovation, technology and society. Portfolio level engagements are not thematic and are focussed on issues specific to managing the portfolio and meeting the investment objective.

Engagement data represents all engagements undertaken at both firm and portfolio level across Royal London Asset Management, and may not be limited to those undertaken solely for the purpose of managing the fund.

Fund Engagement

Engagement outcomes

HSBC Holdings plc – Just Transition

Purpose:

HSBC Holdings plc, a global bank, was engaged as part of our long-running engagement with banks on just transition, seeking for it to integrate social considerations into its Net Zero transition plan.

Outcome:

HSBC is updating its Net Zero transition plan and benchmarking peers to improve just transition disclosures. The bank recognised deficiencies in managing climate-related human rights risks and sector-specific social impacts, but emphasised ongoing measures, such as the implementation of enhanced vulnerability standards and various financial inclusion initiatives. HSBC emphasised challenges in retrofitting liability and Use of Proceed loans in the retail mortgage market. Following our meeting, we will review our draft assessment and share it with the bank to encourage improved disclosure and integration of social considerations.

Lloyds Banking Group plc – Just Transition

Purpose:

Lloyds Banking Group plc (Lloyds), a UK-based financial institution, was engaged as part of our long-running engagement with banks on just transition. We sought the integration of social considerations into the company's decarbonisation strategy.

Outcome:

Lloyds continues to integrate just transition across its strategy, committing £1 billion to its Regional Impact Fund to address regional inequality and drive inclusive economic growth. The bank showcased partnerships with the North East Combined Authority and Office of Investment to channel private investment into green infrastructure. It also expanded its 'Eco Home Reward' scheme, offering up to £2,000 cashback for energy efficiency measures, returning over £2 million to customers in 2025. Lloyds is working with Octopus Energy to reduce heat pump installation wait times and exploring property-linked financing. Before implementing mortgage policy changes, Lloyds conducted analysis to ensure alignment with just transition principles. We will continue this engagement to monitor disclosure improvements.

Fund Engagement

Engagement outcomes

Yorkshire Water – Environment

Purpose:

Yorkshire Water, a UK water utility, was engaged to assess its climate resilience and pollution control strategies.

Outcome:

Yorkshire Water is investing £1.5 billion to upgrade storm overflow systems and implement nature-based solutions such as wetlands and tree planting to improve water quality and biodiversity. The company is also deploying ~20,000 sewer monitors and intelligent pumps to prevent failures, supported by a broader digital transformation programme and investment in green skills for its workforce. On financing, Yorkshire Water is focusing on inflation-linked debt and reducing gearing (a measure of financial leverage) to maintain stability. We will continue engagement to monitor progress on biodiversity initiatives and resilience disclosures.

Market commentary

Market overview

Markets were focused on the US during the fourth quarter, with rate cuts from the Federal Reserve bookending the longest US Federal Government shutdown in history. The decision was accompanied by language suggesting a pause after three cuts in the final four months of 2025.

In the euro zone, the European Central Bank left rates unchanged – with inflation concerns causing reluctance to cut further after four cuts in the first half of 2025. The Bank of England (BoE) cut rates from 4% to 3.75%, the sixth cut since mid-2024 from the recent peak of 5.25%. The BoE noted that inflation was still a concern (reflected in a 5-4 vote) but concerns over downside risks include unemployment edging to its highest rate since the Covid pandemic.

Risk assets closed the year strongly – the third consecutive year of double digit returns for equities. After the sharp fall in the wake of the Trump tariff announcement in early April, global equity markets generally ground higher, including during the fourth quarter, helped by ongoing optimism over AI as well as supportive corporate earnings. For the year as a whole, there was strong performance from all major markets – the US, Europe, UK and Japan – with the US lagging in common currency terms after the US dollar weakened significantly.

Government bond yields were mixed, with US and German government bond yields edging higher, while UK yields moved lower on hopes that the November budget announcement would be gilt-friendly. Gilts rallied as Budget news broke but the initial volatility was absorbed during the course of the day, with expected tax hikes backloaded and some action to curb short-term inflation announced.

Benchmark 10-year gilt yields fell from 4.70% to end at 4.55%, meanwhile UK 30-year gilt yields took a step back from their highest levels in almost 30 years seen in the summer. In the US, 10-year treasury yields rose slightly to 4.14% from 4.13% at the end of September but seen volatility in the interim. The German 10-year bund yield was 2.82% at the end of the fourth quarter, rising from 2.67% three months prior.

The sterling investment grade credit market (iBoxx non-gilt index) returned 2.58% over the period under review. Gilts outperformed credit over the quarter, helped by the longer duration of this market in a quarter where UK government bond yields edged lower. The average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) was relatively unchanged over the period. Spreads began and ended the quarter at 0.77% (iBoxx), compared to the narrowing of spreads seen during the second and third quarters after the widening seen in the first quarter. Sector returns were generally positive, led by banks, insurance and structured bonds.

Outlook

Sterling credit markets have shown remarkable resilience in 2025, weathering external noise and tightening spreads. Despite elevated interest rates and persistent volatility, sterling investment grade credit provided strong returns in 2025. Many of the same uncertainties we were looking at 12 months ago remain in place today – along with some new ones: US policies on tariffs, a new Fed chair and engagement on conflicts such as Gaza and Ukraine remain unpredictable; global inflation is falling but not as fast as economists would like; more central bank rate cuts are expected but there is little consensus around the quantum of these; vast amounts of money are being poured into AI with little attention on the return on that capital.

Sterling credit spreads have continued to tighten through 2025 and are now at levels last seen before the Global Financial Crisis. We see this as logical: defaults are low, company balance sheets are generally healthy, and investors have been buying credit because of attractive yields. At a fundamental level, we still believe that credit spreads over-compensate investors for default risk, and that the all-in yield on sterling credit remains attractive. Furthermore, we continue to find attractive investment opportunities, partly through the new issue market but also by focusing on exploiting market inefficiencies. By focusing on bottom-up analysis, we continue to build overall portfolios that we believe offer attractive risk / return profiles with above-market yields.

While near-term absolute performance is likely to be heavily influenced by movements in the yields of underlying government bond markets, we expect relative performance to continue to be meaningfully influenced by the comparative exposure to supranational bonds and to more economically sensitive or cyclical industrial and consumer sectors. However, we believe that continued emphasis on diversification and our bias towards secured and collateralised debt to help mitigate default risk, as well as our focus on income, will continue to support returns as has been the case through the present environment of volatile yields.

We remain confident that we can further achieve an attractive yield premium in our sterling credit portfolios, as we look to exploit market inefficiencies, with long-standing belief such as the undervaluing of security now augmented by newer inefficiencies such as the ‘mechanised’ approaches used by annuity providers, Exchange Traded Funds and passive funds that treat credit as a homogenous commodity area, buying in a relatively price insensitive manner. Experience suggests that the more credit is treated as a commoditised asset class, the greater the level of inefficiencies that an active manager can exploit.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Concentration risk

The price of Funds that invest in a reduced number of holdings, sectors, or geographical areas may be more heavily affected by events that influence the stockmarket and therefore more volatile.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

Derivative risk

This fund may undertake transactions in derivatives and forward transactions (both on exchange and over the counter (OTC)). These may include interest rate swaps and interest rate futures for the purposes of meeting the investment objective, protecting the risk to capital, duration and credit management, as well as for hedging. While the discerning use of derivatives can be beneficial, derivatives also involve specific risks. These risks relate specifically to market risk, management risk, credit risk, liquidity risk, the risk of mispricing or improper valuation of derivatives and the risk that derivatives may not correlate perfectly with underlying assets, interest rates and indices. The use of derivative instruments may from time to time alter the economic exposure of the fund causing it to deviate significantly from the performance of the market as a whole. The use of these derivatives will be within the parameters allowed for linked funds by the Financial Conduct Authority and Prudential Regulation Authority.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Liquidity risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Responsible investment risk

The Fund can only invest in holdings that demonstrate compliance with certain sustainable indicators or ESG characteristics. This reduces the number securities in which the Fund can invest and there may as a result be occasions where it forgoes more strongly performing investment opportunities, potentially underperforming non-sustainable funds.

Glossary

Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

Bonds

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

Carbon footprint

Exposure to high emitters in the portfolio, expressed in tCO2e/$M invested. Financed emissions are divided by the portfolio value, the same approach for listed companies and private issuers is applied in this metric.

Credit ratings

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

Duration

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

ESG Integration

The consideration of environmental, social and governance (ESG) risk as part of the investment process. ESG integration does not mean the fund is trying to achieve a particular positive ESG outcome. Please check prospectus documentation for details on specific fund-level objectives.

ESG Integration

The consideration of environmental, social and governance (ESG) risk as part of the investment process. ESG integration does not mean the fund is trying to achieve a particular positive ESG outcome. Please check prospectus documentation for details on specific fund-level objectives.

Environmental, social and governance

A list of predefined criteria that determines how a company operates in terms of sustainability and overall corporate governance.

Exclusions

Explicitly prohibits investing in a particular company, sector, business activity, country or region.

Financed emissions

The emissions from activities in the real economy that are financed through lending and investment portfolios, expressed in tCO2e. Emissions are attributed to a portfolio based on the portion of the company's value the portfolio holds, and using different accounting values for public and private corporates. We provide financed emissions for scope 1 and 2 emissions.

Fund analytics

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark.
This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

Fund restrictions definitions

Adult Entertainment: Companies which own or produce adult entertainment services, or engage in the distribution or sale of adult entertainment services.

Armaments: Companies who manufacture armaments or nuclear weapons or associated products.

Controversial Weapons: Weapons which have an indiscriminate and disproportional impact on civilians or weapons that are illegal and prohibited by international conventions and treaties.

Fossil Fuels: Companies involved in the exploration, extraction or refining of oil, or gas, or coal, plus any activity relating to thermal coal.

Gambling: Companies who promote irresponsible gambling which includes betting shops, casinos or amusement arcades.

High Environmental Impact: Companies which have a high environmental impact, and which have 'no evidence' of appropriate environmental management systems.

Human Rights Risks: Companies with a strategic presence operating in countries of concern and which have 'no evidence' of policies or systems to manage human rights risks.

Nuclear Power: Companies who generate energy from Nuclear Power.

Nuclear Weapons: Companies that manufacture, nuclear; or are involved in the production of intended-use parts, whole weapons systems, or exclusive delivery platforms.

Tobacco: Companies which are growing, processing or selling tobacco products.

Alcohol: Companies which have involvement in brewing, distillation or sale of alcoholic drinks.

Glossary

Fund restrictions definitions

Animal Welfare: Companies that conduct animal testing (other than for purposes of human or animal health and/or where it is required by law or regulation).

Implied temperature rise (ITR)

ITR aims to measure the global warming outcome from the emissions trajectory of a company, if the whole economy followed the same trajectory.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

Promotes environmental or social factors

An ESG Fund promotes, among other characteristics, environmental or social characteristics, or a combination of those characteristics, provided that the companies in which the investments are made follow good governance practices.

Redemption yield

The weighted average rate of discount at which the future obligations of interest and capital payments of each of the fund's holdings equates to its current price, gross of relevant fund management costs and gross of tax.

SBTi

The Science-Based Targets initiative is a consortium of organisations that set up the definition and promotion of science-based target setting.

Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.

Sustainable fund objective

A product that has sustainable investment or a reduction in carbon emissions as its objective.

Top 10 holdings

Top 10 assets held by market value, excluding derivatives and cash.

Weighted Average Carbon Intensity (WACI)

In line with our bespoke and targeted approach to credit analysis, we have developed an in-house carbon data tool that addresses coverage and mapping issues with third party systems. The development of this tool has been a critical element of RLAM's ESG integration into our credit process, addressing coverage and mapping issues with third party systems. This enhanced coverage is reflected in the WACI figures provided in this report, with all other metrics instead being based on data from MSCI.

Weighted Average Carbon Intensity (WACI)

Portfolio's exposure to carbon-intensive companies, expressed in tCO2e / $M revenue. Scope 1 and scope 2 GHG emissions are divided by companies revenues, then multiplied based on portfolio weights (the current value of the investment relative to the current portfolio value). The WACI is calculated as a weighted average sum of the holdings with carbon intensity coverage.
