# The fund

## Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return over rolling 12-month periods by primarily investing (at least 70% of its assets) in Short Term Fixed Income Securities. The Fund's comparator benchmark is the Bank of England Sterling Overnight Interbank Average (SONIA) plus 0.5%. For the most appropriate comparison, this should be considered on a 'before the deduction of fees' basis. SONIA is the average overnight interest rate UK banks pay for unsecured transactions in sterling. It is considered to be an appropriate benchmark as it is a widely recognised approach to benchmarking short-term money market and fixed income funds.

## Fund value

## Duration profile

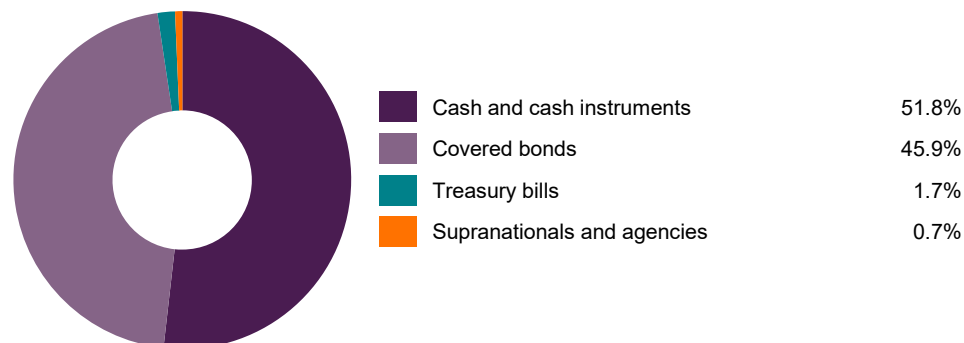

## Performance commentary

Money market rates fell in line with the Bank of England rate cut in May. Longer maturities also moved lower – one-year rates reflecting expectations of UK base rates falling to 3.50% by next summer. However, even with the rate cut, money markets continued to provide attractive overall returns.

Performance was positive over the quarter compared to the SONIA benchmark. At a portfolio level, we had built up a yield premium to the benchmark. Our money market exposure was the main driver of returns, reflecting that this makes up the bulk of the fund's assets. The impact of our covered bond exposure was mixed. While the yield on these bonds remains very attractive, spreads did increase marginally over the period due to proposed regulatory changes in treatment of non-UK issuers. However, we remain comfortable with our covered exposure, as there has been no change in the strong underlying fundamentals for these assets.

# Performance and activity

## Fund activity

Activity was generally in overnight deposits, as well as CDs. For money market exposure, we generally focus on short paper. Core activity focused on three-month CDs, but we did look to add longer dated paper as we were comfortable with the rates available in the six-month to one-year space. As a result, we increased the weighted average life of the fund over the period, reversing the trend seen in the first quarter when the lack of attractive paper meant longer-dated purchases were relatively rare. Examples during the quarter included Bank of Montreal, Nordea Bank and National Bank of Canada.

Covered bonds from favoured issuers are always attractive for the fund, and remain a significant part of the portfolio. Increased availability during the quarter meant activity was more focused on secondary market. We sold several covered bonds that were under one year to maturity, as these shorter bonds do not suit the fund objective – examples including 2026 bonds from National Bank of Canada and Nationwide. We also reduced exposure to Bank of Nova Scotia 2027 bonds, adding 2029 bonds from Canadian Imperial Bank of Commerce and 2028 Commonwealth Bank of Australia covereds, picking up just over 10bps in additional yield on these. There was one new issue of note, the fund buying Skipton 2030 bonds at a spread of 60bps over SONIA.

# Market commentary

## Market overview

The second quarter of 2025 continued the extraordinary series of events that impacted the first quarter. The quarter began with geopolitical news and US policy contributing to a huge spike in volatility across many markets. Somewhat surprisingly, over the quarter the major equity and credit markets shook off this weak start to grind into positive territory for the period as a whole.

The quarter started with 'Liberation day', when the US announced a broad range of materially higher tariffs that it would be imposing on almost all countries it traded with. However, these were rapidly postponed for 90 days, partly due to the adverse global reaction to the announcement. The rest of the period saw further updates on tariffs, including the emergence of new bilateral trade agreements with the US, but the confirmation of a new regime of US trade tariffs generally had a more muted impact than the initial shock. Geopolitical factors also added to uncertainty, as Israel and the US launched air strikes on Iran leading to concerns of renewed regional warfare in the Middle East and entry of the US into another 'forever war'.

Macro uncertainty about tariffs and the progress of President Trump's 'Big beautiful bill', whether these would be implemented, and if so, what impact these would have on global growth and inflation created a difficult backdrop for monetary policymakers in central banks. Faced with the large number of policy unknowns the Federal Reserve therefore left its main policy rate unchanged, while the European Central Bank remained on its modest rate cutting cycle, trimming rates at its April and June meetings. The Bank of England cut rates at its May meeting, leaving these unchanged in June.

Government bond markets were not immune to the heightened volatility. A sign of the extraordinary nature of events was the rise in US treasury yields, and the value of the US dollar falling as uncertainty mounted. For many, this combination of rising yields and falling currency is normally reserved for emerging markets, not for the world's largest economy. As the US President stepped back from some of the more extreme policies and tariffs, government bond yields edged lower. In a quarter of remarkable turmoil, the US, 10-year treasury yields ended almost unchanged, rising just 1bp from 4.21% and ending at 4.22%. Having jumped in the first quarter on the back of the extraordinary easing in German fiscal policy, 10-year bunds yields fell over the period from 2.70% to 2.60%. Benchmark 10-year gilt yields fell from 4.68% to 4.48%, having bounced within the year-to-date range of c4.5-4.8%.

The Bank of England rate cut in May was the focus for money market rates over the quarter. Having started the period at 4.46%, SONIA fell to 4.21% after the cut. Two-year gilts, often seen as a proxy for market expectations of BoE rates, started at 4.21%, fell early in the period to around 4% and then traded in a relatively tight range for the rest of the period, ending at 3.82%.

## Outlook

It is notable that after three months that created a lot of news headlines and uncertainty, markets largely appeared to shrug off 'noise'. Despite considerable uncertainty in the outlook, markets have returned to become driven more by current fundamentals.

On an underlying basis, our credit analysis and company meetings have generally remained cautiously positive: companies are not experiencing the same volatility in their earnings that market moves would imply, and as yet, few are guiding to a major impact from tariffs. In the short term, further announcements on tariffs and US fiscal policy will undoubtedly have an impact on markets, but we believe that markets are becoming less easily spooked after a roller coaster first few months of the new administration.

Although money market rates and bond yields fell over the quarter as a whole, we believe that the yields across our range of liquidity and short-dated funds remain attractive – particularly in an environment where uncertainty (whether measured in business surveys or looking at market volatility measures) remains elevated. We believe that will remain the case. While short-dated yields could fall due to lower interest rates, consensus is that these moves will be limited.

We expect the Bank of England to retain its current data-driven approach. As at the end of June, the market is pricing in two cuts of 25bps, in August and November respectively – these both being months when the Bank publishes its quarterly Monetary Policy Report which provides updated economic analysis and inflation projections. Recent economic data within the UK has continued to support the narrative that base rates remain too high and should be reduced further from here over time. Economic growth remains anaemic at best, and there is evidence of a weaker labour market. We therefore think that at the margin, the market is now too cautious in its expectations over the next 12 months and will continue to look for opportunities to lock in attractive rates where possible.

For a wider view on prospects for the rest of 2025, and how Royal London Asset Management approaches volatile markets, read the thoughts of Piers Hillier, Chief Investment Officer, Mike Fox, Head of Equities, Trevor Greetham, Head of Multi Asset, and Will Nicoll, Head of Fixed Income in our mid-year outlook at [www.rlam.com](http://www.rlam.com).

# Risks and Warnings

## Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

## Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

## EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

## Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

## Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

## Government and public securities risk

The Fund can invest more than 35% of net assets in different Transferable Securities and Money Market Instruments issued or guaranteed by any EEA State, its local authorities, a third country or public international bodies of which one or more EEA States are members.

## Inflation risk

Where the income yield is lower than the rate of inflation, the real value of your investment will reduce over time.

# Glossary

## Asset allocation

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

## Fund value

Total value of the fund as of the last business day of the calendar month. The fund value is as at close of business and on a mid-price basis.

## Money market instruments

Investments that pay interest, have a short duration and are designed to maintain a stable value.

## Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

## Performance

Performance is calculated using the daily end of day NAV per share produced by HSBC based on the mid price.

## Weighted average maturity

The average length of time to maturity of all underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to the money market rate, rather than the time remaining before the principal value of the security must be repaid.

## Yield to maturity

A bond's yield to maturity is the total expected return if it is held until its maturity date.
