# The fund

## Fund performance objective and benchmark

The Fund's investment objective is to achieve a consistent monthly income with capital growth over the medium term (3-5 years) by investing at least 80% in sterling-denominated corporate bonds. Both the Markit iBoxx Sterling Non-Gilts All Maturity Total Return GBP Index (the "Index") and the IA Sterling Corporate Bond Sector are considered appropriate benchmarks for performance comparison. The Index is regarded as a good measure of the performance of corporate bonds valued in sterling. This is considered an appropriate benchmark for performance comparison, as many of the Scheme's potential investments will predominantly be included in the Index.

## Performance commentary

The third quarter saw positive returns from sterling credit investment grade markets (iBoxx). Against this, the fund outperformed the index. Despite the volatile nature of newsflow and government bond markets in 2025, performance remains comfortably ahead of the index yearto-date.

Most of our sterling credit portfolios hold a modest long duration position and this hurt relative returns given the increase in yields over the quarter. However, this position does not reflect an overall view on bond yields, more that at the margin, and especially with recent steepening in the yield curve, we are finding attractive opportunities in mid-long dated bonds, pushing our duration higher. We remain focused on bottom-up credit selection, rather than taking positions based on overall market yield levels.

Sector positioning was positive. Our bias towards insurance bonds was helpful as the sector performed strongly, as was our exposure to the structured sector. Our longstanding underweight in supranational bonds also helped performance as the lower perceived risk of the supranational sector contributed to it again lagging the wider market.

Stock selection effects were positive during the guarter, particularly within the structured sector. Our exposure to Unifund was a notable example. These are secured bonds financing loans to two universities. The University of Sheffield repaid its loan at a significant premium to market pricing the quarter, resulting in strong performance from the bonds. Our holdings in shopping centres Meadowhall and Metrocentre also performed well. Banks stock selection was also helpful, notably subordinated bonds from Standard Chartered, Santander and Close Brothers.

## **Fund activity**

New issue activity was lower than usual during the first two months of the quarter thanks to the normal summer lull, but activity picked up in September as issuers returned to primary markets. There continued to be strong liquidity in the secondary market and attractive opportunities to add to portfolios.

We continue to find attractive opportunities in the water sector, a key area for infrastructure spending and a regulated industry. We bought into a new issue by Yorkshire Water at a significant yield premium to market pricing, while in the secondary market, we added to our position in Welsh Water, in what we consider a very well offered bond at an attractive premium in the market. In the water space, we were also active in managing existing positions, notably a switch into index-linked bonds from Artesian. Artesian is an issuer of index-linked bonds on behalf of water companies, including names like Severn Trent, Portsmouth Water, South East Water and South West Water, with principal and coupons backed by quarantee

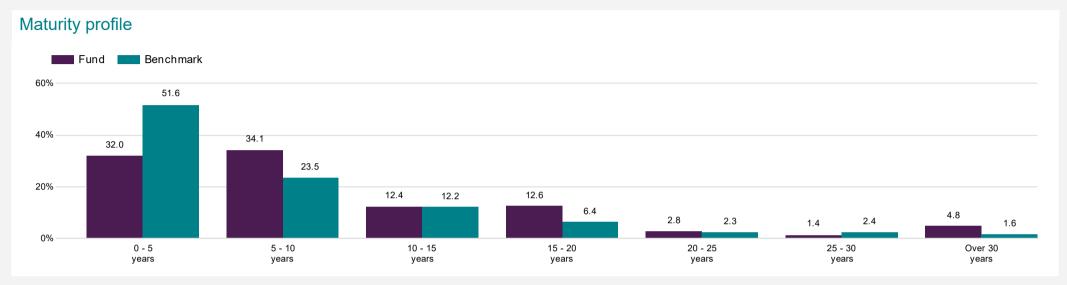

Banks and financials dominated new issue activity towards the end of the quarter, and we participated in buying into a new 2031 issue of senior notes by Bank of Montreal at an attractive yield premium. In the insurance sector, we added sterling-denominated bonds from Metropolitan Life Global Funding and Massachusetts Mutual Life Insurance Company, two US insurers where the bonds rank alongside policyholders. Also within the insurance sector, we participated in a tender of Legal & General legacy debt, selling the bond back to the issuer at par, which reflected a negative credit spread at the time of sale, adding significant value over the time of ownership.

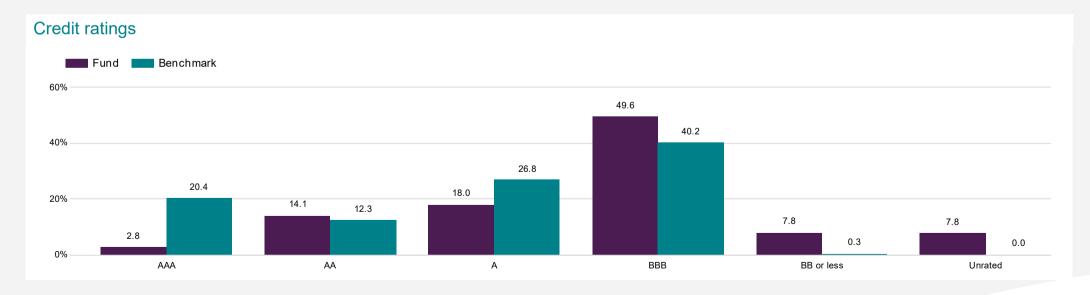

With overall market levels somewhat tighter, we have looked at areas that would usually be seen as offering lower value. An example in the government guaranteed area was Saltaire Finance, a special purpose vehicle, which was established in connection with the management and delivery of the UK's Affordable Homes Guarantee Scheme. The bonds were issued to help fund the development of affordable homes. The bonds came to market at an attractive level given market levels and very low credit risk given the UK Government guarantee. Another area was covered bonds. These are regulated by the Bank of England and secured on high quality underlying mortgages, and we added a new issue from Leeds Building Society over the period. We also added covered bonds from Korea Housing Finance Corporation, a government owned issuer providing mortgages to support low- to middle-income households in South Korea, which came at an attractive credit spread compared to UK covered bonds.

# **Fund breakdown**

The fund

# **Fund Engagement**

### **Engagement definition**

Engagement is active dialogue with investee companies (or other entities). There are two types: engagement for information, which is dialogue as part of investment research or ongoing monitoring, without specific objectives for change, and engagement for change, which is purposeful dialogue to influence positive change, with defined objectives and demonstrable outcomes.

### **Engagements**

Engagement activity	Fund 3 months	Fund 12 months
Number of entities engaged	19	32
Number of engagements	24	72

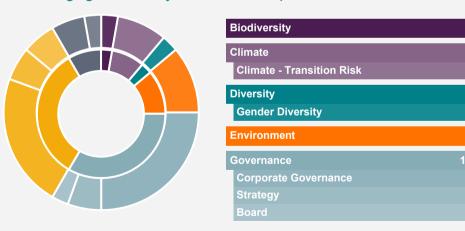

This is an estimate. Some engagements at the issuer level may not have been attributed to the specific bond held in the fund, resulting in a lower number of engagement activities.

# **Engagement focus**

Firm-wide engagement activity is centred around six themes which we have identified in consultation with our clients. These are: climate change; nature and biodiversity; health; governance and corporate culture; social and financial inclusion; innovation, technology and society. Portfolio level engagements are not thematic and are focussed on issues specific to managing the portfolio and meeting the investment objective.

Engagement data represents all engagements undertaken at both firm and portfolio level across Royal London Asset Management, and may not be limited to those undertaken solely for the purpose of managing the fund.

### Total engagements by theme and topic

Social & Financial Inclusion	12
Just transition	8
Labour & Human Rights	2
Social & Financial inclusion	2
Technology, Innovation & Society	3
Technology & Society	2
Cybersecurity	1

The numbers of engagements and themes/topics discussed may differ where a single engagement covers multiple themes/topics.

# **Fund Engagement**

## **Engagement outcomes**

### BP Plc - Multi-thematic

### Purpose:

This meeting was our first interaction with BP PLC, a global energy company, under the strategic engagement programme, covering various material issues beyond climate concerns. The meeting aimed to understand how BP is balancing traditional energy and renewables, embedding anti-corruption frameworks, improving safety culture, and managing pollution prevention and community engagement.

#### Outcome:

BP outlined its evolving strategy in response to global events, with a renewed focus on capital allocation and performance across oil, gas and renewables. Recent leadership changes, including a new Chair and CEO, are shaping strategic direction, supported by ongoing portfolio and cost reviews.

The company continues to strengthen ethical business practices through mandatory training, whistleblower protections, and anti-corruption policies. In 2024, 251 employee separations were linked to non-compliance with its Code of Conduct. Safety remains a top priority, with lessons from incidents like the Husky Toledo refinery fire driving improvements in emergency response and safety culture.

Environmental risk management is supported by digital platforms such as LENS, which track incidents and share learnings. BP is focused on designing out pollution risks and engaging with communities through liaison officers. Future engagement will monitor progress on strategic delivery, ethical conduct, safety performance, and environmental stewardship.

### Bunzl Plc - Workplace culture

### Purpose:

The purpose of the engagement meeting with Bunzl, a global distribution and outsourcing company, was to discuss the company's approach to workforce engagement, whistleblowing, and reporting on workplace conduct, as well as to explore opportunities for improving transparency and disclosures.

#### Outcome:

Bunzl has shown a strong commitment to workforce engagement, with directors leading listening sessions across regions and languages. Although its decentralised model creates challenges for centralised reporting, the company is open to improving disclosures and performance monitoring. Bunzl shared whistleblowing data, noting an increase in reports, particularly from recent acquisitions in Latin America, which the company suggests growing employee confidence in reporting mechanisms. Serious cases are escalated to the board, with outcomes ranging from dismissals to educational interventions. The company is strengthening local reporting, conducting annual self-assessments, and using employee surveys, including discrimination-specific questions, to monitor culture, with positive results observed.

We encouraged Bunzl to enhance the granularity of its Speak Up data, benchmark performance against industry standard, provided by Navex, a leading compliance and risk management platform, and showcase positive survey outcomes. The company is considering tracking substantiation rates for future board reporting. Next steps include delivering a more detailed breakdown of Speak Up data, exploring external benchmarking, and reporting substantiation rates by risk category.

# **Fund Engagement**

# **Engagement outcomes**

### Centrica Plc - Net zero

### Purpose:

The purpose of the engagement meeting with Centrica, a UK energy company, was to provide feedback on the improvements seen in its new climate transition report and to ask further questions to gain clarity on lobbying, physical climate risk, and the company's biodiversity practices.

#### Outcome:

Centrica has made significant progress following our engagements. The company's latest climate transition report demonstrates improved transparency on emissions offsetting, remuneration, and decarbonisation strategies, directly addressing areas we previously raised. Centrica clarified its lobbying position, confirming the company had exited from a controversial trade body in 2023 and committing to greater disclosure through a new trade association report. It now assesses trade associations for alignment with the Paris Agreement and just transition principles and has committed to a twelve-month engagement plan for those institutions not aligned.

On physical climate risk, Centrica provided disclosures consistent with the Task Force on Climate related Financial Disclosures (TCFD). The company highlighted its low exposure due to asset location and lifecycle, while proactively managing risks such as extreme weather and sea level rise; although current disclosures remain primarily linked to climate impacts. Biodiversity was acknowledged as an emerging priority, with existing action plans and strategies in place to meet the policy requirement that development projects deliver a measurable net gain - typically at least 10% - in biodiversity as a condition of planning approval. While net gain strategies are being developed, current disclosures remain largely focused on climate-related impacts. A follow-up climate letter will be issued to maintain engagement and encourage further progress on integrating biodiversity considerations into corporate reporting and strategy.

# **Market commentary**

### Market overview

Following a turbulent second quarter shaped by the initial shock of US trade tariff announcements, markets stabilised during the third quarter. Globally, attention shifted towards fiscal policy and government debt sustainability. With central banks circumspect about the prospects for further rate cuts, uncertainty around potential rate cuts influenced bond yields and investor confidence.

Risk assets generally performed well over the period. US markets navigated mixed signals. While second-quarter earnings generally exceeded subdued expectations, and business surveys reflected a sense of optimism, signs of a cooling labour market and renewed concerns over the Federal Reserve's independence added a layer of uncertainty during the period. The US dollar softened slightly, while equities—especially in the tech sector—remained buoyant, driven by ongoing enthusiasm for artificial intelligence despite growing concerns over near-term revenue potential.

A shadow was cast over the UK's economic outlook during the summer quarter. Inflation proved more persistent than expected, prompting the Bank of England to strike a more cautious tone even as it proceeded with a rate cut in August. Expectations for further easing were dampened and resulted in upward pressure on gilt yields. There were mounting concerns over the government's fiscal health, leading to speculation about potential tax increases or further gilt issuance in the forthcoming autumn budget.

The eurozone also faced a mixed guarter. While robust activity data and strong earnings in select sectors offered encouragement, political uncertainty sparked volatility and weighed on market performance. This was perhaps most visible in France, where the resignation of Prime Minister Bayrou, after losing a confidence vote over plans to address debt levels, added to pressure on President Macron.

Government bond markets proved volatile over the summer. Benchmark 10-year gilt vields rose from 4.48% to end at 4.70%, but with sharp rallies in both early August and September. Meanwhile at 5.75%, UK 30-year gilt yields hit their highest levels in almost 30 years. In the US, 10-year treasury yields stood at 4.13% at the end of September, slightly lower than levels seen at the start of July but with considerable volatility in the interim. In the eurozone, the spread between 10-year bonds in France and Germany expanded to the widest level in more than a year as French bond yields climbed higher amid the country's debt crisis. The German 10-year bund yield was 2.67% at the end of the third quarter, broadly in line with previous months.

The sterling investment grade credit market (iBoxx non-gilt index) returned 0.69% over the period under review, outperforming gilts, with the average sterling investment grade credit spread (the average extra yield available from non-gilt bonds compared with government debt of equal maturity) tightening over the period. Spreads narrowed from 0.87% to 0.77% (iBoxx) over the third quarter, continuing the narrowing of spreads seen during the second quarter which had more or less reversed the widening seen in the first quarter. Sector returns were generally positive, led by banks, insurance and structured bonds, while supranationals, utilities and consumer sectors lagged.

### Outlook

There is no let-up in market uncertainty. Geopolitics are perhaps a bigger factor than at any time this century given the ongoing situation in Ukraine, wider Russian belligerence in Europe, the conflict in Gaza and the potential for spillover effects. At the same time, policy uncertainty has also not eased, with tariffs still very much on the US agenda, the current administration still announcing policies without details appearing to be complete and doing nothing to erase concerns about political interference in monetary policy. On top of these, budget concerns are also a significant factor in both the US and UK. Monetary policy settings are generally seen as supportive of fixed income markets, but even here, there is uncertainty around the timing and quantum of rate cuts as inflation is still not fully subdued. These factors help explain why government bond yields have been relatively volatile in 2025, and there seems little prospect of a material change in this in the next few months.

Yet risk markets generally, including sterling credit, have continued to produce attractive returns. With sterling investment grade credit spreads having compressed in recent months, it is natural to look at absolute levels to determine whether the market still offers 'value'. With default rates low, and new issuance active, we continue to believe the all-in yield on sterling credit remains attractive. Furthermore, we continue to find attractive investment opportunities, partly through the new issue market but also by focusing on exploiting market inefficiencies. By focusing on bottom-up analysis, we continue to build overall portfolios that we believe offer attractive risk / return profiles with above-market yields.

While near-term absolute performance is likely to be heavily influenced by movements in the vields of underlying government bond markets, we expect relative performance to continue to be meaningfully influenced by the comparative exposure to supranational bonds and to more economically sensitive or cyclical industrial and consumer sectors. However, we believe that continued emphasis on diversification and our bias towards secured and collateralised debt to help mitigate default risk, as well as our focus on income, will continue to support returns as has been the case through the present environment of volatile yields.

Royal London Asset Management - Quarterly Investment Report - Royal London Corporate Bond Monthly Income Trust - EN - 2025-09-30-GB - Report ID: 269533

# **Risks and Warnings**

#### Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

#### Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

#### Derivative risk

This fund may undertake transactions in derivatives and forward transactions (both on exchange and over the counter (OTC)). These may include interest rate swaps and interest rate futures for the purposes of meeting the investment objective, protecting the risk to capital, duration and credit management, as well as for hedging. While the discerning use of derivatives can be beneficial, derivatives also involve specific risks. These risks relate specifically to market risk, management risk, credit risk, liquidity risk, the risk of mispricing or improper valuation of derivatives and the risk that derivatives may not correlate perfectly with underlying assets, interest rates and indices. The use of derivative instruments may from time to time alter the economic exposure of the fund causing it to deviate significantly from the performance of the market as a whole. The use of these derivatives will be within the parameters allowed for linked funds by the Financial Conduct Authority and Prudential Regulation Authority.

### **EPM** techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

#### Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

### Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

# Cumulative (%)

# Annualised (%)

	3 Month	6 Month	1 Year	3 Years	5 Years	3 Years (p.a.)	5 Years (p.a.)
Fund (gross)	1.33	3.94	5.59	29.02	6.62	8.85	1.29
Fund (net)	1.17	3.63	4.96	26.54	2.95	8.15	0.58

# Year on year performance (%)

	30/09/2024 - 30/09/2025	30/09/2023 - 30/09/2024	30/09/2022 - 30/09/2023	30/09/2021 - 30/09/2022	30/09/2020 - 30/09/2021
Fund (gross)	5.59	13.01	8.12	(19.63)	2.82
Fund (net)	4.96	12.31	7.35	(20.23)	1.99

Past performance is not a guarantee or reliable indicator of future returns. The impact of fees or other charges including tax, where applicable, can be material on the performance of your investment.

Source: RLAM as at 30 September 2025. All figures are mid-price to mid-price for the Royal London Corporate Bond Monthly Income Trust A Inc GBP share class.

#### **Asset allocation**

Breakdown of the assets by asset classes. Based on RLAM asset classification scheme.

#### **Attribution**

Attribution is shown for the most recent quarter. Attribution figures are based on close of business returns for both the fund and the index whereas performance figures are based on midday returns for the fund and close of business for the index. Therefore the performance will not include market moves between midday when the fund is priced, and close of business when the index is calculated. This may result in a different figure being shown for the guarterly performance vs attribution data.

#### **Bonds**

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

### **Credit ratings**

Credit ratings are based on RLAM composite ratings which uses a hierarchy of S&P, Moody's and then the Fitch rating.

#### **Duration**

Measure of sensitivity of a Fixed Income instrument to changes in interest rates, indicating the potential impact of interest rate fluctuations on the value of the investment.

### **Fund analytics**

All figures exclude cash. Credit bonds include non-sterling bonds and CDs where held within the fund or benchmark. This is applicable to the following sections: fund Asset Allocation, Duration, Yield curve, Sector breakdown, Financial holdings, Credit ratings.

### **Gross redemption vield**

Gross redemption yield is the rate of discount at which a bond's future obligations of interest and capital payments equates to its current price. The gross redemption yield shown for the fund is the average for its individual holdings. weighted by their current value, gross of relevant fund management costs and gross of tax.

### **Number of holdings**

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

#### Number of issuers

Number of unique issuers of all assets held by the Fund, excluding cash, currency and derivatives.

#### Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

### **Pricing**

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

#### Sector breakdown

Breakdown of the fixed income assets, excluding derivatives and cash by RLAM's internal industry sector classification scheme. Figures are subject to rounding.
