The fund

Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return over the course of a market cycle, which should be considered as a period of 6-7 years, by predominantly investing in other funds, known as collective investment schemes (CIS). The IA Mixed Investment 0-35% Shares sector and the Fund's custom composite benchmark are considered appropriate benchmarks for performance comparison.

The Fund's composite benchmark is considered a good representation of the breakdown of the Fund's assets:

7% FTSE All-Share Total Return Index,
11% FTSE World Total Return GBP Index
2% MSCI Emerging Markets ESG Leaders Net Return Index (expressed in GBP)
15% FTSE Actuaries UK Conventional Gilts (All Stocks) Total Return (GBP) Index
15% iBoxx Sterling Non-Gilt Total Return (GBP) Index
10% ICE Bank of America Merrill Lynch 1-5 years Sterling Non-Gilt Index
10% FTSE Actuaries UK Conventional Gilts up to 5 Years Total Return (GBP) Index
30% Bank of England Sterling Overnight Index Average (SONIA)

Performance commentary

Equities

Equity markets continued to rally over the quarter, as investors shrugged off tariff concerns and geopolitical tensions. The S&P 500, Nasdaq, and Russell 2000 all hit fresh all-time highs in September in local currency terms. Summer returns have historically been subdued for equity markets, but a strong September (with Fed resuming to cut interest rates) drove the S&P 500 to its strongest third quarter since 2020. We remained overweight equities in this backdrop, and increased the positioning as the macro data continued to recover from April lows; this added value over the period.

Bonds

In most major economies, government bond yields continued to drift higher, especially at longer dated levels. Concerns around the fiscal situations in Europe and the UK seemed to be key drivers of this theme, while political uncertainty and a more hawkish sounding BoJ saw yields trend higher in Japan too. US treasuries performed much better with yields falling, even at the longer end. This came despite fresh attacks on Fed independence as Trump moved to fire Lisa Cook from the Fed's Board of Governors. Weaker labour market data which gave way to Fed rate cuts was one key driver of US bond outperformance. We held a small underweight to government bonds over most of the period.

Equity regions

We spent most of the period with a preference towards US, Japan and emerging markets and away from Europe. The positioning was supported by relatively strong earnings outlook for the US and Japan in particular, especially vs Europe where earnings season results were lacklustre. There was a further boost to US and emerging market shares from the enthusiasm around AI stocks, which continued to perform strongly. Regional positioning added value over the quarter.

Equity sectors

Growth stocks, particularly in technology and discretionary sectors, led the charge as markets soared higher, buoyed by a strong earnings season results from the megacap names. Defensive sectors lagged, with staples especially weak. We were overweight growth sectors and underweight defensives over the period, which added value over the period.

Performance and activity

Fund activity

On a tactical level, we maintained our overweight in global equities and increased it at the margin, with a continued preference towards US equities and growth sectors, which continued to benefit from relatively strong corporate earnings growth. Our Investment Clock is moving towards Recovery, a phase where stocks typically offer their best returns. The global macro backdrop remains supportive, earnings remain strong and central banks are cutting rates.

Market commentary

Market Review

After a volatile second quarter shaped by the initial shock of US trade tariff announcements, markets stabilised over the summer and several global indices made their way to new highs. In the US, equities were propelled by a robust earnings season and optimistic business surveys. During August there was a brief bout of weakness in markets amid downward revisions to the US labour market data. However, the announcement of this year's first rate cut buoyed sentiment across the board, helping the rally to continue.

Asian equities produced strong returns. Japan performed strongly, benefiting from a favourable US trade deal and better-than-expected economic growth. China's performance has also been particularly strong, supported by an extended trade truce with the US and government initiatives to bolster its domestic technology sector. Emerging markets have benefited from a weaker US dollar and progress on trade talks, although country-specific issues, such as the impact of US tariffs on India, created divergence in performance.

Government bond markets proved volatile over the summer. Benchmark 10-year gilt yields rose from 4.48% to end at 4.70%, but with sharp rallies in both early August and September. Meanwhile at 5.75%, UK 30-year gilt yields hit their highest levels in almost 30 years. In the US, 10-year treasury yields stood at 4.13% at the end of September, slightly lower than levels seen at the start of July but with considerable volatility in the interim. In the eurozone, the spread between 10-year bonds in France and Germany expanded to the widest level in more than a year as French bond yields climbed higher amid the country's debt crisis. The German 10-year bund yield was 2.67% at the end of the third quarter, broadly in line with previous months.

The Bank of England rate cut in August was the focus for money market rates over the quarter. Having started the period at 4.21%, SONIA fell to 3.97% after the cut. Two-year gilts, often seen as a proxy for market expectations of BoE rates, ended the quarter at 3.99% having started July at 3.82%, having spent most of the period in a relatively tight range between 3.9% and 4%.

Broad commodities ended higher as precious metals continued to rally. Gold made new all-time highs above \$3,800 and recorded its strongest month in more than 14 years in September.

The US dollar stabilised after its worst H1 in nearly 50 years; sterling weakened against most majors on fiscal concerns ahead of the Autumn budget.

Outlook

The Investment Clock is moving into Recovery and monetary policy is easing. This is a positive backdrop for stocks, and we have been overweight, with a focus on Japan, the emerging markets and US growth sectors. Political and policy worries are sapping the dollar and fuelling gold.

There are echoes of the late 1990s. The AI boom is raising corporate earnings, but valuations are near levels last seen in the dot com era. Most new innovations get overblown in the short term. We are tactically bullish while the Fed is cutting rates, but strategically cautious – as evidenced by our more diversified asset mix.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Exchange rate risk

Changes in currency exchange rates may affect the value of your investment.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital. Unlike the income from a single fixed interest security, the level of income (yield) from a fund is not fixed and may go up and down. Bond yields (and as a consequence bond prices) are determined by market perception as to the appropriate level of yields given the economic background.

Liquidity risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Emerging markets risk

Investing in Emerging Markets may provide the potential for greater rewards but carries greater risk due to the possibility of high volatility, low liquidity, currency fluctuations, the adverse effect of social, political and economic instability, weak supervisory structures and accounting standards.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Fund investing in funds risk

The Fund is valued using the latest available price for each underlying investment, however it may not fully reflect changing stockmarket conditions and the Fund may apply a 'fair value price' to all or part of its portfolio to mitigate this risk. In extreme liquidity conditions, redemptions in the underlying investments, and/or the Fund itself, may be deferred or suspended.

Charges from capital risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Glossary

Asset allocation

Based on RLAM's holistic approach to fixed income management and fund weights relative to their respective benchmarks. May not reflect tactical exposures.

Bonds

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

Efficient Portfolio Management (EPM) techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. The use of these instruments may expose the Fund to volatile investment returns and increase the volatility of the net asset value of the Fund. EPM techniques may involve the Fund entering into transactions with counterparties where there may be a risk of counterparty default. The Fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations.

Geographical breakdown

Breakdown of assets by geographical regions. 'Global' region includes global fixed income and overseas securities exposures, which are sterling hedged and commodity exposures.

Hedging

Reduces risk by protecting an investment with another related investment.

Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

Total return

A total return is a combination of capital growth and income. Capital growth is defined as the rise in an investment's value over time and income as the payment an investment generates, such as dividends or bond coupons.
