Royal London UK Mid Cap Growth Fund

Quarterly Investment Report

30 June 2026

Quarterly Report

The fund as at 30 June 2026

The purpose of this report is to provide an update on the Royal London UK Mid Cap Growth Fund. The report has been produced by Royal London Asset Management. The report starts with a summary dashboard showing key information about the fund. A glossary is located at the end of the report covering the description of some of the more technical terms used within the report. All data is as at the report date unless otherwise stated.

The fund

Fund performance objective and benchmark

The Fund aims to provide a return greater than that of the FTSE® 250 ex-IT (Investment Trust) Total Return GBP Index (the "Index") over rolling 5-year periods, through capital growth, after the deduction of charges. The Index has been selected as a target benchmark because it is representative of the type of companies in which the Fund invests, and it is therefore an appropriate measure for the Fund's performance. Management of the Fund is not restricted by this target benchmark and the Fund does not base its investment process upon the Index. As a result, the Fund can invest in companies that are not part of the Index.

Performance commentary

The fund outperformed the benchmark and peer group median during the quarter. The period saw a continuation of corporate activity across several portfolio holdings, with bid approaches announced for easyJet, Tate & Lyle, Bodycote, and Gamma Communications.

Investment platforms AJ Bell and Integrafin contributed significantly to performance, benefiting from a combination of solid trading and a tailwind from rising asset values. AJ Bell's momentum was particularly strong within its direct-to-consumer business which prompted an upgrade to its full-year guidance, while Integrafin delivered a solid net flow performance. Another key contributor was Hill & Smith, which performed strongly after releasing a robust trading update driven by strength from its US businesses.

Conversely, the main detractors to relative performance came from positions we did not hold or where we remain underweight. Computacenter, which is not held, performed strongly as it continued to benefit from robust hyperscaler demand. Meanwhile, Aberdeen Group, in which the fund holds an underweight position, performed well on the back of strong trading in its Interactive Investor business, with rising equity markets further benefiting its investments division.

Fund activity

Following the recent change in fund manager, trading activity continued to focus primarily on restructuring the portfolio. As part of this ongoing process, off-benchmark exposure was carefully managed, while exposure to companies in the latter stages of the corporate lifecycle was increased to bring a better overall balance to the portfolio. Consequently, the holdings in IMI, Future, and Marshalls were sold, while positions in Aberdeen Group, Pennon, Mondi, and Vesuvius were initiated. Elsewhere, the fund's position in Telecom Plus was also completely exited (prior to its profit warning).

Fund breakdown

Sector weights

Fund Engagement

Engagement definition

Engagement is active dialogue with investee companies (or other entities). There are two types: engagement for information, which is dialogue as part of investment research or ongoing monitoring, without specific objectives for change, and engagement for change, which is purposeful dialogue to influence positive change, with defined objectives and demonstrable outcomes.

Engagements

Engagement activity	Fund 3 months	Fund 12 months
Number of entities engaged	3	31
Number of engagements	5	48

This is an estimate. Some engagements at the issuer level may not have been attributed to the specific bond held in the fund, resulting in a lower number of engagement activities.

Total engagements by theme and topic

The numbers of engagements and themes/topics discussed may differ where a single engagement covers multiple themes/topics.

Engagement focus

Firm-wide engagement activity is centred around six themes which we have identified in consultation with our clients. These are: climate change; nature and biodiversity; health; governance and corporate culture; social and financial inclusion; innovation, technology and society. Portfolio level engagements are not thematic and are focussed on issues specific to managing the portfolio and meeting the investment objective.

Engagement data represents all engagements undertaken at both firm and portfolio level across Royal London Asset Management, and may not be limited to those undertaken solely for the purpose of managing the fund.

Fund Voting

Voting category breakdown

Notable votes

Alfa Financial Software Holdings

Elect Christopher P. Sullivan - against:

We voted against as the nominee serves as the Chair of the Nominating Committee and the board lacks sufficient diversity. We question the lack of progress towards the 40% Listing Rule and FTSE Women Leader Review target, particularly given the company's disclosure in this regard significantly lags FTSE 350 peers. Further, we also note that the most recent appointee to the board did not increase gender diversity and the board has made no clear indication of how it intends to improve board diversity in the short term.

Hill & Smith PLC

Elect Tony Quinlan - against:

We voted against this nominee who serves as the company's senior independent director and as the joint longest serving board member who sits on the company's nomination committee. The year-on-year progress with regard to senior management diversity is acknowledged. However, the board's composition has continuously failed to meet the FTSE Women Leaders Review target of 40%, with board-level diversity declining year-on-year.

While we note that the board-level gender diversity was below target due to the recent resignation of a female director, it has dropped further in advance of the 2026 annual meeting despite two new appointments to the board in the form of the CFO and non-executive chair.

Market commentary

Market Review

Contrarian investors will be familiar with the saying ‘buy on the sound of cannons, sell on the sound of trumpets.’ Investors that followed this old adage will have been handsomely rewarded in the second quarter of the year as the end of March proved to be the bottom for markets. Equities rebounded sharply as peace talks between the US and Iran were formally launched and fears of a prolonged and damaging closure of the Strait of Hormuz dissipated. Oil prices retreated from the war-induced peak of \$120 per barrel, in the process cooling inflation expectations and the anticipated path of central bank rate hikes. This fuelled further momentum into the AI trade supported by the data centre capex cycle and the high-profile SpaceX initial public offering.

UK equity performance was somewhat tempered by the declines in the energy sector, unsurprisingly given the near 40% collapse in the oil price over the period. Underneath the surface however there was a very significant relief rally in more cyclical areas of the market, with notable outperformance from more domestically oriented, consumer facing companies. The real estate sector also saw a sharp recovery, not only helped by lower UK borrowing costs but also the £12.6bn takeover bid for Segro from US logistics giant Prologis. While the bid has been unanimously rejected, this served as something of a ‘crystallisation’ event in the market highlighting the value of UK-listed real estate companies trading at substantial discounts to their net asset values.

Outlook

Investors are now looking through the geopolitical fog, with the 60-day ceasefire announced in June signalling to markets that the war is now hopefully in its ‘end game.’ Despite being labelled by the IEA as the “biggest ever disruption” to global oil supplies, this has somewhat remarkably been absorbed by the market’s global inventory buffers and emergency releases of strategic reserves. That said, investors should remain vigilant to potential upside risks to energy prices in light of historically low inventories, global stockpile replenishment to come (notably from the US and China) and uncertainties around the extent to which the Strait of Hormuz will reopen. For now, the global growth outlook is improved, and we expect secular growth drivers such as electrification, security of supply, deglobalisation and increased defence spending to be reinforced by the war.

Last quarter we spoke of an increasingly gloomy domestic backdrop with households and businesses facing renewed inflationary pressures and market expectations for multiple rate hikes, despite higher interest rates unlikely to be an efficient policy response to an external supply shock and a weakening domestic backdrop. While markets are still pricing in one interest rate hike in 2027 rather than cuts, expectations have now come back meaningfully even in light of renewed UK political uncertainty. The resignation of Prime Minister Starmer paves the way for Andy Burnham as ‘PM-in-waiting’ and presents the opportunity for a reset in the coming months. The absence of a drawn-out leadership contest is to be welcomed, although markets will reserve judgment until the emergence of policy details still to come.

We see UK equities as being driven by different drivers to the rest of the world, with only limited exposure to the AI buildout, the market’s attractive valuations, and the potential for an improved domestic backdrop and the removal of political uncertainty currently priced into markets. The valuation disconnect of the market is increasingly validated by international strategic buyers and private equity, which is now reaching the upper end of the market with five FTSE 100 companies attracting bids this year. There have been a number of false dawns in recent years, but we believe that the combination of improving domestic fundamentals and value being crystallised through M&A could provide an improved environment for active managers that can take advantage of this valuation opportunity.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Glossary

Efficient Portfolio Management (EPM) techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. The use of these instruments may expose the Fund to volatile investment returns and increase the volatility of the net asset value of the Fund. EPM techniques may involve the Fund entering into transactions with counterparties where there may be a risk of counterparty default. The Fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations.

Number of holdings

Total number of unique holdings of the Fund excluding cash, currency and derivatives.

Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

Rolling 5-Year Period

A rolling 5-year period is any period of five years, no matter which day you start on.

Sector weights

Breakdown of holdings by FTSE ICB (Industry Classification Benchmark) sector relative to the benchmark index.

Top 10 holdings

Top 10 assets held by market value, excluding derivatives and cash.
