The fund

Fund performance objective and benchmark

The Fund's investment objective is to achieve a total return over the course of a market cycle, which should be considered as a period of 6-7 years, by predominantly investing in other funds, known as collective investment schemes (CIS). The Fund is actively managed, meaning that the manager will use their expertise to select investments to meet the objective. The IA Mixed Investment 0-35% Shares sector and the Fund's custom composite benchmark are considered appropriate benchmarks for performance comparison.

Performance commentary

Equities

Global equities snapped a 10-month winning streak in March as geopolitical developments in the Middle East weighed heavily on risk sentiment. Markets recorded their sharpest monthly decline since 2022, with global stocks falling just over 6% from recent all-time highs. As the war broke out, we moved from an overweight position to underweight which proved beneficial for performance.

Bonds

Government bond yields finished the quarter higher as markets began to price out a large amount of previously expected central bank interest rate cuts. As a result, we moved further underweight government bonds over the period. Elsewhere, we moved to a neutral stance in global high yield as the conflict began to protect portfolios against a potential stagflationary shock from higher energy prices.

Equity regions

Recent regional equity trends reversed as the Iran war started, with prior outperformers Japan and emerging markets leading declines, reflecting greater sensitivity to higher energy prices and their higher beta in a risk-off environment. Active regional risk was reduced over the quarter, while modest overweights in Japan, supported by strong earnings, and emerging markets, reflecting attractive valuations, were maintained and funded through an underweight in Europe given its greater exposure to higher energy costs. After adding value previously, regional positioning detracted over March as prior outperformers were hit hardest.

Equity sectors

US sector positioning remained modest over the quarter, although as the conflict persisted and oil prices stayed elevated, we moved overweight energy, resulting in a broadly neutral impact on performance.

Property

We remain positive on the long-term prospects for property within a diversified multi asset portfolio; we are neutral on a tactical basis. Commercial property continued to rise on a total return basis over the quarter.

Performance and activity

Fund activity

On a tactical level, we entered the Iran war overweight equities and quickly moved to an underweight position as tensions escalated. We reduced our active risk across regions and US sectors throughout the quarter, reflecting the volatile market conditions. Our Investment Clock has just entered Overheat from Recovery, which supports our view of an overweight position in commodities reflecting expectations of higher oil prices. We continue to hold gold as a tactical hedge, which was positive for performance throughout 2025.

Market commentary

Market Review

Global equities made a steady start to the year as investors focused on the path of disinflation, the timing of policy easing, and the resilience of economic activity. However, all this was upended in March as hostilities erupted in the Middle East. March was the worst month for global equities since the start of the Ukraine conflict in 2022, which more than wiped out the previous two months' gains. A sharp rise in energy prices reignited inflation concerns, resulting in a market sell off.

The US was one of the weakest performing markets, as expectations for early interest rate cuts were pushed further out by a renewed bout of inflation anxiety linked to higher oil prices. Large technology stocks were a notable drag on performance, having already come under pressure earlier in the quarter due to valuation concerns and uncertainty around the impact of new AI capabilities on software business models. As volatility increased, investors rotated away from last year's technology leaders toward a broader mix of sectors, including more rate-sensitive and value-oriented stocks.

European equities also gave back January and February's gains as rising energy prices led to concerns that inflation could remain above target. Markets in the region had previously benefited from falling inflation, raising hopes that European policy rates are near their peak. Energy and defence stocks provided pockets of relative strength during March. This helped to support the UK market, which was slightly more resilient.

Asia was one of the more resilient regions, though the performance of markets varied greatly. Taiwanese and Korean stocks had produced strong double-digit returns prior to the Middle East conflict but came under pressure as investors assessed Asia's dependence on energy imports. Japan was one of the few markets to finish the quarter higher, benefiting from yen weakness and expectations of increased fiscal support following the ruling Liberal Democratic Party's decisive victory in February's snap election.

Commodities surged over the quarter as escalating geopolitical tensions culminated in direct military conflict with Iran. Brent crude recorded its largest quarterly gain since the Gulf War in 1990 (+94%).

Outlook

The Investment Clock has entered Overheat following recent escalation in the Middle East, which has seen equities retreat from their highs, as spiking energy prices are reigniting inflationary concerns across the globe. This is a positive backdrop for commodities and we have been overweight.

With oil trading around \$100 a barrel, markets have been quick to price out a large amount of previously expected central bank interest rate cuts. A Federal Reserve rate hike could be the tipping point that triggers a de-rating in US technology.

There are echoes of the late 1990s. The AI boom is raising corporate earnings, but valuations are near levels last seen in the dot com era. Most new innovations get overblown in the short term.

US political and policy worries have been sapping the US dollar and increasing market volatility. We continue to remain vigilant in case geopolitical risk continues to drive stock valuations lower.

Risks and Warnings

Investment risk

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk

Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

EPM techniques risk

The Fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the Fund to increased price volatility.

Exchange rate risk

Investing in assets denominated in a currency other than the base currency of the Fund means the value of the investment can be affected by changes in exchange rates.

Interest rate risk

Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Liquidity risk

In difficult market conditions the value of certain fund investments may be difficult to value and harder to sell, or sell at a fair price, resulting in unpredictable falls in the value of your holding.

Emerging markets risk

Investing in Emerging Markets may provide the potential for greater rewards but carries greater risk due to the possibility of high volatility, low liquidity, currency fluctuations, the adverse effect of social, political and economic instability, weak supervisory structures and accounting standards.

Counterparty risk

The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Fund investing in funds risk

The Fund is valued using the latest available price for each underlying investment, however it may not fully reflect changing stockmarket conditions and the Fund may apply a 'fair value price' to all or part of its portfolio to mitigate this risk. In extreme liquidity conditions, redemptions in the underlying investments, and/or the Fund itself, may be deferred or suspended.

Charges from capital risk

Charges are taken from the capital of the Fund. Whilst this increases the yield, it also has the effect of reducing the potential for capital growth.

Glossary

Asset allocation

Based on RLAM's holistic approach to fixed income management and fund weights relative to their respective benchmarks. May not reflect tactical exposures.

Bonds

Securities that represent an obligation to repay a debt, with interest. Investment grade bonds are high quality bonds that are viewed as being highly likely to make all scheduled payments of interest and principal. Low quality bonds carry higher risk but also typically pay higher rates of interest. Corporate bonds are those issued by companies to raise finance.

Efficient Portfolio Management (EPM) techniques

The Fund may engage in EPM techniques including holdings of derivative instruments. The use of these instruments may expose the Fund to volatile investment returns and increase the volatility of the net asset value of the Fund. EPM techniques may involve the Fund entering into transactions with counterparties where there may be a risk of counterparty default. The Fund's ability to use EPM strategies may be limited by market conditions, regulatory limits and tax considerations.

Geographical breakdown

Breakdown of assets by geographical regions. 'Global' region includes global fixed income and overseas securities exposures, which are sterling hedged and commodity exposures.

Hedging

Reduces risk by protecting an investment with another related investment.

Performance

The Fund price is taken at mid-day using swing prices where applicable, while the index performance is priced at close of business. Significant intra-day market movements at the start or end of the day may therefore distort comparisons.

Pricing

The Fund's price may swing to bid or offer to protect existing investors from the costs associated with buying or selling the fund's underlying assets when other investors are entering or leaving the fund. Performance is based on this pricing.

Total return

A total return is a combination of capital growth and income. Capital growth is defined as the rise in an investment's value over time and income as the payment an investment generates, such as dividends or bond coupons.
