

Royal London Global Multi Asset Portfolios (GMAPs)

Royal London Asset Management recognises the need for financial advisers to provide investment choices that are appropriately matched to their clients' attitude to risk.

We work with a number of leading risk profiling providers, who map our GMAPs to their own risk profile scores. It is important to emphasise that these risk profiling tools are only one aspect of

an adviser's suitability process, and others factors should also be considered. Below you can see how our GMAPs are risk mapped.

Weightings may vary according to tactical asset allocation and the fund may invest outside of indicated asset classes as the manager sees fit.

Defaqto Risk Ratings as at June 2023.

The Dynamic Planner Risk Profile assessment of the fund is correct as at July 2023 and is reviewed independently by Dynamic Planner on an ongoing quarterly basis; and, if necessary, may change in future. Dynamic Planner is the

brand name of the software system powered by Distribution Technology (DT). Copyright© Distribution Technology Ltd 2023 onwards.

EValue Q2 2023 Report. Risk Ratings (Scale 1-10) data generated by Fund Risk Assessor on a 10-year time horizon.

FinaMetrica Risk Tolerance as at July 2023. FinaMetrica scores are for each of the funds considered in isolation and are based on "OK Risk".

Synaptic based on 1-10 scale, at Q2 2023.

Oxford Risk as at July 2023. Oxford Risk ratings for funds/portfolios provide an estimate of their risk level. They do not by themselves indicate the suitability of a fund/portfolio for an investor. Overall suitability should be assessed by a qualified financial advisor, taking the investor's financial personality, financial circumstances, and investing knowledge & experience into account. Data provided by FE fund info as at 31 July 2023.

Investment risks

Past performance is not a guide to future performance.

The value of investments and any income from them may go down as well as up and is not guaranteed. Investors may not get back the amount invested.

Credit risk: Should the issuer of a fixed income security become unable to make income or capital payments, or their rating is downgraded, the value of that investment will fall. Fixed income securities that have a lower credit rating can pay a higher level of income and have an increased risk of default.

Derivative risk: Derivatives are highly sensitive to changes in the value of the underlying asset which can increase both fund losses and gains. The impact to the fund can be greater where they are used in an extensive or complex manner, where the fund could lose significantly more than the amount invested in derivatives.

Efficient Portfolio Management (EPM) techniques: The fund may engage in EPM techniques including holdings of derivative instruments. Whilst intended to reduce risk, the use of these instruments may expose the fund to increased price volatility.

Exchange rate risk: Changes in currency exchange rates may affect the value of your investment.

Interest rate risk: Fixed interest securities are particularly affected by trends in interest rates and inflation. If interest rates go up, the value of capital may fall, and vice versa. Inflation will also decrease the real value of capital.

Emerging markets risk: Investing in emerging markets may provide the potential for greater rewards but carries greater risk due to the possibility of high volatility, low liquidity, currency fluctuations, the adverse effect of social, political and economic instability, weak supervisory structures and accounting standards.

Counterparty risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the fund to financial loss.

Fund investing in funds risk: The fund is valued using the latest available price for each underlying investment, however it may not fully reflect changing stockmarket conditions and the fund may apply a 'fair value price' to all or part of its portfolio to mitigate this risk. In extreme liquidity conditions, redemptions in the underlying investments, and/or the fund itself, may be deferred or suspended.

Liquidity and dealing risk: The fund invests indirectly in assets that may at times be difficult to value, harder to sell, or sell at a fair price. This means that there may be occasions when you experience a delay in being able to deal in the fund, or receive less than may otherwise be expected when selling your investment.
